General Certificate of Education Ordinary Level

MARK SCHEME for the November 2004 question paper

4024 MATHEMATICS

4024/02

Paper 2, maximum raw mark 100

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

Maths November 2004 Mark Scheme:

IGCSE Mer Merlyn ,2015-08-27 Buku IGCSE ini merupakan aplikasi dari pelajaran matematika yang berbasis di University of Cambridge Berisi kumpulan soal lengkap dengan kunci jawaban Memudahkan para siswa dalam menghadapi pelajaran matematika Semoga buku ini bisa menjadi jembatan bagi para siswa yang ingin menguasai mata pelajaran matematika dengan baik **TENCON 2004** ,2004 Quiet Wisdom John Sylvester Lofty,2006 Textbook **British Education Index** ,2005 **Gaming the Vote** William Poundstone,2009-02-17 At least five U S presidential elections have been won by the second most popular candidate because of spoilers Minor candidates who take enough votes away from the most popular candidate to tip the election The spoiler effect is a consequence of the impossibility theorem discovered by Nobel laureate economist Kenneth Arrow which asserts that voting is fundamentally unfair and political strategists are exploiting the mathematical faults of the simple majority vote This book presents a solution to the spoiler problem a system called range voting already widely used on the Internet which is the fairest voting method of all according to computer studies Range voting remains controversial however and author Poundstone assesses the obstacles confronting any attempt to change the American electoral system From publisher description **The Myth of Voter Fraud** Lorraine C. Minnite,2011-03-15 Allegations that widespread voter fraud is threatening to the integrity of American elections and American democracy itself have intensified since the disputed 2000 presidential election The claim that elections are being stolen by illegal immigrants and unscrupulous voter registration activists and vote buyers has been used to persuade the public that voter malfeasance is of greater concern than structural inequities in the ways votes are gathered and tallied justifying ever tighter restrictions on access to the polls Yet that claim is a myth In *The Myth of Voter Fraud* Lorraine C Minnite presents the results of her meticulous search for evidence of voter fraud She concludes that while voting irregularities produced by the fragmented and complex nature of the electoral process in the United States are common incidents of deliberate voter fraud are actually quite rare Based on painstaking research aggregating and sifting through data from a variety of sources including public records requests to all fifty state governments and the U S Justice Department Minnite contends that voter fraud is in reality a politically constructed myth intended to further complicate the voting process and reduce voter turnout She refutes several high profile charges of alleged voter fraud such as the assertion that eight of the 9 11 hijackers were registered to vote and makes the question of voter fraud more precise by distinguishing fraud from the manifold ways in which electoral democracy can be distorted Effectively disentangling misunderstandings and deliberate distortions from reality *The Myth of Voter Fraud* provides rigorous empirical evidence for those fighting to make the electoral process more efficient more equitable and more democratic **Education by Numbers** Warwick Mansell,2007 It sounded a noble aim for New Labour to prioritise education The method they chose since coming to power was a relentless attempt to raise standards by an obsession with tests and exams in every school almost at every level

book discusses Hong Kong's use of onscreen marking OSM in public examinations. Given that Hong Kong leads the way in OSM innovation, this book has arisen from a recognised need to provide a comprehensive coherent account of the findings of various separate but linked validation studies of onscreen public examinations in Hong Kong. The authors discuss their experience of the validation process, demonstrating how high stakes innovation should be fully validated by a series of research studies in order to satisfy key stakeholders.

Children's Mathematics Elizabeth Carruthers, Maufry Worthington, 2006-08-30

In Case Study 5 a grassroots Children's Mathematics Network group, the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking. Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning. The standard of the mathematical understanding, thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age.

Researching Effective CPD in Mathematics Education
RECME project NCETM 2009

The review also plays great score by play-based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism. Section 115 features children's mathematical graphics and emphasises: 'The role of mark making in children's cognitive development is set out in the taxonomy' (Carruthers and Worthington 2006). The report recommends that local authorities, leaders, managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes.

The Williams Maths Review DCSF 2008

At the very heart of the success of the book is the authors' ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world. This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process.

Branwen Llewelyn Jones, Early Years Consultant at PACE Ltd, TACTYC

Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout. If you want to expand your understanding upwards and outwards, then get a copy soon.

Times Educational Supplement

I first read *Children's Mathematics: Making Marks, Making Meaning* a couple of years ago and it had an immediate impact on my own thinking and teaching, and the work I do with trainee teachers. I'm sure you will find it compelling reading too. I think it has the potential to change in a fundamental way how we think about early mathematical development.

Lynne McClure, Editor, Math Coordinator's File, Mathematics Association

In their exceptionally readable and informative book *Children's Mathematics: Making Marks, Making Meaning*, Carruthers and Worthington (2006) draw attention to one of the main goals of early years teaching: that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school. These authors suggest that by

encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH

This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics
