impending Moon related activities and a good starting point for young researchers Sun, Moon, and Stars Agnes Giberne, 1893

The Moon and the Western Imagination Scott L. Montgomery, 2022-03-29 The Moon is at once a face with a thousand expressions and the archetypal planet Throughout history it has been gazed upon by people of every culture in every walk of life From early perceptions of the Moon as an abode of divine forces humanity has in turn accepted the mathematized Moon of the Greeks the naturalistic lunar portrait of Jan van Eyck and the telescopic view of Galileo Scott Montgomery has produced a richly detailed analysis of how the Moon has been visualized in Western culture through the ages revealing the faces it has presented to philosophers writers artists and scientists for nearly three millennia To do this he has drawn on a wide array of sources that illustrate mankind's changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science Montgomery especially focuses on the seventeenth century when the Moon was first mapped and its features named From literary explorations such as Francis Godwin's *Man in the Moone* and Cyrano de Bergerac's *L'autre monde* to Michael Van Langren's textual lunar map and Giambattista Riccioli's *Almagestum novum* he shows how Renaissance man was moved by the lunar orb how he battled to claim its surface and how he in turn elevated the Moon to a new level in human awareness The effect on human imagination has been cumulative our idea of the Moon and therefore the planets is multilayered and complex having been enriched by associations played out in increasingly complicated harmonies over time We have shifted the way we think about the lunar face from a perfect body to an earthlike one with corresponding changes in verbal and visual expression Ultimately Montgomery suggests our concept of the Moon has never wandered too far from the world we know best the Earth itself And when we finally establish lunar bases and take up some form of residence on the Moon's surface we will not be conquering a New World fresh and mostly unknown but a much older one ripe with history

The Heather Moon Charles Norris Williamson, Alice Muriel (Livingston) Williamson, 1912

The Moon that Wasn't Helge Kragh, 2008-11-06 The planet Venus is the closest neighbour to the Earth and in several respects similar to our globe It revolves around the Sun at an average distance of 0.72 astronomical units in an elliptical orbit of eccentricity 0.007 The corresponding 3 numbers for the Earth are 1 and 0.017 The mean density of Venus is 5.2 g cm³ that of the Earth 5.5 g cm³ Venus acceleration of gravity at its equator is 8.922 m/s² compared with 9.8 m/s² at the Earth The escape velocity is 10.4 km/s while the corresponding gure of the Earth is 11.2 km/s Although the mass of Venus is somewhat smaller than that of the Earth the ratio is $M_V/M_E = 0.815$ The diameters of the two planets are almost the same In other words Venus is indeed a sister planet of the Earth In earlier times when almost nothing was known about the physical conditions of Venus the similarity appeared even stronger than today Not only was Venus period of rotation thought to be close to that of the Earth it was also possible and indeed common to imagine intelligent life on Venus
