The contact between terminals A and B is normally open. The contact is closed at 325 PSI and the engine cooling fan motor will run at high speed. The contact will reopen at 275 PSI. The engine cooling fan motor will run for approximately 20 seconds after the contact has reopened to ensure that when the A/C compressor turns back on, the fan does not cycle rapidly between low and high speeds. The contact between terminals C and D is normally closed. The contact opens at 425 PSI shutting off the A/C compressor. When the pressure falls to 250 PSI, the contacts close and allow A/C compressor operation.

With voltage applied, energizes compressor clutch. Sends signal to PCM to adjust transmission EPC pressure to compensate for change in torque supply to transmission.
