Warning:

- ▶ Ask the dealer or an authorized technician to install the air conditioner.
 - Improper installation by the user may result in water leakage, electric shock, or fire.
 - Install the unit at a place that does not obstruct the weight.
 - Insufficient strength may cause the unit to fall down, resulting in injuries.
- ▶ Use the specified cables for wiring. Make the connections securely so that the voltage level of the cables will comply to local codes.
 - Improper connection and handling may generate heat and cause a fire.
- ▶ Refrigerator wiring should not, under any circumstances, be used for the specified place.
 - Improper installation may cause the unit to topple and result in injury.
- ▶ Always secure filter and other accessories specified by illustrated illustrations.
- ▶ Ask an authorized technician to install the accessories. Improper installation by the user may result in water leakage, electric shock, or fire.
- ▶ Never repair the unit. If the air conditioner was set for regular, use with it is needed.
 - If the unit is repaired improperly, water leakage, electric shock, or fire may result.
- ▶ Do not handle the unit recklessly.
 - Improper handling may result in injury.
- ▶ Refrigerant gas (under charging) installation work, substitute the service.
 - If the refrigerant gas comes into contact with a flame, poisonous gases will be released.
- ▶ Install the air conditioner according to the installation manual.
 - If the unit is installed improperly, water leakage, electric shock, or fire may result.
- ▶ Handle electric work done by a licensed electrician according to "Electricity Handling Cautions" (Owner's) and "Notice When the electrician" was the electrician given. In this manual, an electrician is specified when it:

- ▶ Do not try to install the outdoor unit horizontal when it is used.
 - If the terminal cover (panel) is not installed properly, dust or water may enter the outdoor unit and fire or electric shock may result.
- ▶ Take care in obtaining used equipment that is used outdoors, etc., and always with a refrigerant different from the refrigerant specified on the unit.
 - If a different refrigerant or air is mixed with the original refrigerant, the refrigerant cycle may malfunction and the unit may be damaged.
- ▶ When the air conditioner is installed in a wall or on a ceiling, use a hole to prevent the refrigerant from leaking from the unit and the safety of the refrigerant is not lost.
 - Consult the dealer regarding the appropriate measures to prevent the safety loss from being prevented. Damage due to lack of proper in the room equipment.

 - If the refrigerant gas leaks and is exposed to a fan heater, stove, grill, or other heat source, it may generate carbon monoxide.
- ▶ Do not disconnect or change the settings of the protection devices.
 - If the pressure switch, thermal switch, or other protection device is shorted and operated wrongly, or parts other than those specified are substituted (over the specified), fire or explosion may result.
- ▶ In a place of this product, use with great caution.
- ▶ The installer and anyone associated should ensure safety against leakage according to local regulations or standards.
 - Following standards may be applied when it is not regulated or not available. The general standard for the place of installation, such as a bathroom, etc., where refrigerant gas can accumulate, where refrigeration is needed than the air.
- ▶ Note: If the unit is the type, the installation site must be carefully checked for any leaks or electric shock before the unit is used. The following are the points to be checked.
 - Direct exposure to outdoor air may have harmful effects on people or food.

1.2. Precautions for devices that use R410A refrigerant

Caution:

- ▶ Do not use existing refrigerant piping.
 - The old refrigerant and refrigerant oil in the existing piping contains a large amount of chlorine which may cause the refrigerant oil of the new unit to deteriorate.
 - R410A is a high-pressure refrigerant and can cause the existing piping to burst.
- ▶ Use refrigerant piping made of plastic or metal substitution copper and copper alloy materials. Plastic must follow the following, the use of the lower and higher materials of piping causes damage and loss of function. (The following are examples, including, including protection, etc., including, or any other materials.)
 - Contaminants on the inside of the refrigerant piping may cause the refrigerant and reduced oil to deteriorate.
- ▶ Secure the piping in the correct state to installation locations and keep both ends of the piping sealed until just before loading. (Other effects and other points in a plastic bag.)
 - If dust, dirt, or water enters the refrigerant cycle, deterioration of the oil and compressor trouble may result.
- ▶ Use R410A, either oil or refrigerant (used oil must) with a refrigerant oil to seal both ends of the connections.
 - The refrigerant oil will degrade if it is mixed with a large amount of mineral oil.
- ▶ Use R410A refrigerant to fill the system.
 - If gas refrigerant is used to seal the system, the composition of the refrigerant in the cylinder will change and performance may drop.
- ▶ Do not use a refrigerant other than R410A.
 - If another refrigerant (oil), etc.) is mixed with R410A, the piping in the refrigerant may deteriorate.
- ▶ Use a vacuum pump with a vacuum level about 100 μm.
 - The vacuum pump oil may flow back into the refrigerant cycle and cause the refrigerant oil to deteriorate.
- ▶ Do not use the existing tools that are used with conventional refrigerants.
 - Charge needles, along a hose, gas leak detectors, service hoses about valves, refrigerant storage (oil), etc., refrigerant (oil) may easily leak.
 - If the conventional refrigerant and refrigerant oil are mixed in the R410A, the refrigerant may deteriorate.
 - If water is mixed in the R410A, the refrigerant oil may deteriorate.
 - Some R410A does not contain any chlorine, gas leak detectors for conventional refrigerants will not react to it.
- ▶ The unit uses a non-flammable refrigerant.
 - Malicious charging of water may cause the refrigerant to deteriorate.
- ▶ The operating method when charging the unit is:
 - If dust, dirt, or water gets into the refrigerant cycle, the refrigerant may deteriorate.

by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
