Baskov, 2012-12-06 This book deals with the problems and methods of paleohydrogeology in relation to ore deposit studies. It presents a description of different techniques used in the course of structural paleohydrogeological, paleohydrogeochemical and paleohydrogeothermal investigations. It also provides information on the regular regional patterns of formation and subsequent distribution of ground water within different shells of the Earth. The main aspects of metal content of ground water and contemporary processes of ore genesis are discussed. Ore deposits are classified according to paleohydrogeological conditions under which they were formed. The readers are acquainted with paleohydrogeological analysis of these conditions for different types of ore deposits, namely: 1) ore deposits formed in artesian basins in which sedimentary rocks were predominant both at the time of magmatic activity and in the periods free of this activity; 2) ore deposits formed in artesian and artesian basins and admassifs characterized by extensive development of volcanic rocks and magmatic activity; 3) ore deposits that originated in hydrogeological massifs and admassifs in the process of formation of linear weathering crusts. This book, which should be of great interest to geologists engaged in prospecting for and exploration and study of ore minerals, also includes 38 tables, 60 illustrations and a bibliography of 450 titles. EVGENY A. BASKOV. Contents: Introduction. 1. The Science of Paleohydrogeology and Its Objectives in Ore Deposit Studies. 4. 2. Principal Distribution Patterns of Contemporary Ground Water. 15. 2. 1. Notion of Hydrosphere.

**Continued Operation of Los Alamos National Laboratory**, 2008      **Geochemical Modeling for Mine Site Characterization and Remediation** D. Kirk Nordstrom, Andrew Nicholson, 2017-10-01 The single most important factor for the successful application of a geochemical model is the knowledge and experience of the individual(s) conducting the modeling. *Geochemical Modeling for Mine Site Characterization and Remediation* is the fourth of six volumes in the *Management Technologies for Metal Mining Influenced Water* series about technologies for management of metal mine and metallurgical process drainage. This handbook describes the important components of hydrogeochemical modeling for mine environments, primarily those mines where sulfide minerals are present, metal mines and coal mines. It provides general guidelines on the strengths and limitations of geochemical modeling and an overview of its application to the hydrogeochemistry of both unmined mineralized sites and those contaminated from mineral extraction and mineral processing. The handbook includes an overview of the models behind the codes, explains vital geochemical computations, describes several modeling processes, provides a compilation of codes and gives examples of their application, including both successes and failures. Hydrologic modeling is also included because mining contaminants most often migrate by surface water and groundwater transport and contaminant concentrations are a function of water residence time as well as pathways. This is an indispensable resource for mine planners and engineers, environmental managers, land managers, consultants, researchers, government regulators, nongovernmental organizations, students, stakeholders, and anyone with an interest in mining-influenced water. The other handbooks in the series are *Basics of Metal Mining Influenced Water*, *Mitigation of Metal*
