

Matheson Gas Data Book 7th Edition

Description

From Acetylene to Xenon, Matheson's Gas Data Book describes more than 130 common and uncommon compressed gases. This important chemical handbook is crammed with useful data — physical constants, known applications, government regulations, toxicity data, infrared spectra, first aid — and much more.

This 7th edition reflects current scientific knowledge about compressed gases and equipment. Government regulations are cited; control and detection equipment are discussed; and approved first aid treatments are listed.

Introductory sections cover Safe Handling of Compressed Gases in Laboratory and Plant, General Handling and Storage Instructions, and Useful Conversion Factors.

The gases are listed in alphabetical order for easy reference. They are identified by both their common name and by their Chemical Abstracts designation.

Information under each gas covers important physical constants (both English and SI units). Toxicity and First Aid information (where applicable) covering established OSHA and ACGIH exposure limits, and PRECAUTIONS in handling and storage where safe handling procedures, leak detection, materials of construction and gas handling equipment are covered.

Chemists in the laboratory, engineers and plant personnel using compressed gases, your company doctor, and your company library will all find the information in this book invaluable. Educators and students can look upon this book as a comprehensive source of data about gases.

and material data pooled from the lifetime experience of many of the world's most able practitioners of the art and science of accelerators. The seven chapters include both theoretical and practical matters as well as an extensive glossary of accelerator types. Chapters on beam dynamics and electromagnetic and nuclear interactions deal with linear and nonlinear single particle and collective effects including spin motion, beam environment, beam-beam, beam-electron, beam-ion, and intrabeam interactions. The impedance concept and related calculations are dealt with at length as are the instabilities due to the various interactions mentioned. A chapter on operational considerations including discussions on the assessment and correction of orbit and optics errors, real-time feedbacks, generation of short photon pulses, bunch compression, phase space exchange, tuning of normal and superconducting linacs, energy recovery linacs, free electron lasers, cryogenic vacuum systems, steady-state microbunching, cooling, space charge compensation, brightness of light sources, collider luminosity optimization, and collision schemes, machine learning, multiple frequency rf systems, FEL seeding, ultrafast electron diffraction, and Gamma Factory. Chapters on mechanical and electrical considerations present material data and important aspects of component design including heat transfer and refrigeration. Hardware systems for particle sources, feedback systems, confinement including undulators and acceleration, both normal and superconducting, receive detailed treatment in a sub-systems chapter, beam measurement and apparatus being treated therein as well. A detailed name and subject index is provided together with reliable references to the literature where the most detailed information available on all subjects treated can be found.

Handbook for the Analysis and Identification of Alternative Refrigerants Thomas J. Bruno, 2019-07-23. Many laboratories are engaged in research on the development of new fluids for use as refrigerants to replace the fully halogenated materials that are believed to contribute to atmospheric ozone depletion. An integral part of this effort is the chemical analysis of new fluids that are synthesized, prepared, and tested. This comprehensive book, which is divided into two parts, fills an important need in this vital chemical analysis protocol. The first part reviews the major chemical analysis methods that have been developed and used at NIST and in other laboratories. This review covers spectroscopic, chromatographic, and wet analytical methods with treatment divided by qualitative identification, qualitative determinations, and chemical reaction screening. The second part contains a compilation of analytical information of the new fluids and their products. Physical properties, mass spectra, infrared spectra, ultraviolet spectra, nuclear magnetic resonance spectra, and gas chromatographic retention data are provided for each fluid or product.
