

- (iii) Many found it beyond them to manipulate the equation once they had substituted $y = 20$. A common error was to 'factor out a 2' or a '4' in some way and reduce the equation to 2 terms. Another common error was to take logs at this stage, term by term.

Many started to be using equation solving functions on their calculators, as the correct decimal answer appeared after incorrect working or no working had been shown. Calculator use such as this should be encouraged only for checking answers and not as a substitute for showing a correct method. These candidates were only credited if there was enough method shown, i.e. if $e^x = 3$ at least was seen, but they could not obtain more than 2 of the 4 marks available.

A good number of candidates did score full marks and they clearly understood that the solution -8 needed to be discarded.

Answers: (a) $c = 5$, $k = 9$ (b)(i) 79.2 (ii) $x = \ln 3$

Question 10

- (a) (i) Some excellent sketches were seen for this question, with a high proportion scoring 3 or 4 marks. Occasionally, the shape of the curve was insufficiently accurate to score, with the shape of each cycle being more parabolic than sinusoidal. Some candidates did not sketch the graph over its full domain, stopping at $x = 180^\circ$. Some candidates did not start or finish at the correct point and sketched the rest of the graph correctly. A good number of sketches were very well presented and had been carefully drawn, others were less so.
- (ii) This was generally correct. A few answers of 6, this being the common incorrect answer.
- (iii) Again, generally correct with the common incorrect answer being 2, the number of cycles.
- (b) Many scored 1 mark for writing down $\cos \sec x = \frac{1}{\sin x}$ or similar. A good number scored 2 marks for also using the relationship $\cos^2 x + \sin^2 x = 1$ correctly in the required way. Only the strongest candidates appreciated that the expression needed to be negative since the angle was in the 4th quadrant and scored full marks.

Answers: (a)(i) 3 (ii) 180 (b) $-\frac{1}{\sqrt{1-p^2}}$

Question 11

- (i) A common error was $-3(x-4)^{-2}$ for the second term, being unable to subtract 1 from a negative exponent seemingly. Another common error was, after correct work, incorrect simplification to $\frac{1}{(x-4)^2}$ or $-\frac{1}{(x-4)^2}$. A small number of candidates thought they were differentiating a product here, rather unfortunately, as the lengthy work they undertook gained no credit. Candidates must read the question carefully. A small number of candidates used the quotient rule to differentiate the second term, often successfully, but frequent slips were made by candidates using this lengthier method.
- (ii) Candidates could only score here if they had a correct first derivative in part (i). Some solved the quartic and showed enough evidence of correct work to gain the method mark. Some who attempted to solve the quartic multiplied out or took square roots at an incorrect point and made no further valid progress. A good number correctly verified that when $x = 3$ and when $x = 5$ the first derivative was zero. Very few candidates gave sufficient evidence of their method to show that the y -coordinates were as given. Many were simply showing that the x -coordinates were as given and then simply stating the given answers. Again, candidates need to be clear that any question that asks them to 'Show that....' requires clear and full method to be shown to gain full marks.
