The Discrete Charm of the Machine Ken Steiglitz, 2019-02-05 The genesis of the digital idea and why it transformed civilization A few short decades ago we were informed by the smooth signals of analog television and radio we communicated using our analog telephones and we even computed with analog computers Today our world is digital built with zeros and ones Why did this revolution occur The Discrete Charm of the Machine explains in an engaging and accessible manner the varied physical and logical reasons behind this radical transformation The spark of individual genius shines through this story of innovation the stored program of Jacquard's loom Charles Babbage's logical branching Alan Turing's brilliant abstraction of the discrete machine Harry Nyquist's foundation for digital signal processing Claude Shannon's breakthrough insights into the meaning of information and bandwidth and Richard Feynman's prescient proposals for nanotechnology and quantum computing Ken Steiglitz follows the progression of these ideas in the building of our digital world from the internet and artificial intelligence to the edge of the unknown Are questions like the famous traveling salesman problem truly beyond the reach of ordinary digital computers Can quantum computers transcend these barriers Does a mysterious magical power reside in the analog mechanisms of the brain Steiglitz concludes by confronting the moral and aesthetic questions raised by the development of artificial intelligence and autonomous robots The Discrete Charm of the Machine examines why our information technology the lifeblood of our civilization became digital and challenges us to think about where its future trajectory may lead

Common Sense Mathematics Ethan D. Bolker, Maura B. Mast, 2016-05-04 Common Sense Mathematics is a text for a one semester college level course in quantitative literacy The text emphasizes common sense and common knowledge in approaching real problems through popular news items and finding useful mathematical tools and frames with which to address those questions We asked ourselves what we hoped our students would remember about this course in ten years time From that ten year perspective thoughts about syllabus what topics should we cover seemed much too narrow What matters more is our wish to change the way our students' minds work the way they approach a problem or more generally the way they approach the world Most people skip the numbers in newspapers magazines on the web and more importantly even in financial information We hope that in ten years our students will follow the news confident in their ability to make sense of the numbers they find there and in their daily lives Most quantitative reasoning texts are arranged by mathematical topics to be mastered Since the mathematics is only a part of what we hope students learn we've chosen another strategy We look at real life stories that can be best understood with careful reading and a little mathematics
