**Frontiers in the Acquisition of Literacy** Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired

by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research

**The Education Invasion** Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their

**The Importance of Being Little** Erika Christakis, 2016-02-09 Christakis expertly weaves academic research personal experience and anecdotal evidence into her book a bracing and convincing case that early education has reached a point of crisis her book is a rare thing a serious work of research that also happens to be well written and personal engaging and important Washington Post What kids need from grown ups but aren t getting an impassioned plea for educators and parents to put down the worksheets and flash cards ditch the tired craft projects yes you Thanksgiving Handprint Turkey and exotic vocabulary lessons and double down on one simple word play NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child s eye view of the learning environment To a four year old watching bulldozers at a construction site or chasing butterflies in flight the world is awash with promise Little children come into the world hardwired to learn in virtually any setting and about any matter Yet in today s preschool and kindergarten classrooms learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child s intelligence while overtaxing the child s growing brain These mismatched expectations wreak havoc on the family parents fear that if they choose the wrong program their child won t get into the right college But Yale early childhood expert Erika Christakis says our fears are wildly misplaced Our anxiety about preparing and safeguarding our children s future seems to have reached a fever pitch at a time when ironically science gives us more certainty than ever before that young children are exceptionally strong thinkers In her pathbreaking book Christakis explains what it s like to be a young child in America today in a world designed by and for adults where we have confused schooling with learning She offers real life solutions to real life issues with nuance and direction that takes us far beyond the usual prescriptions for fewer tests more play She looks at children s use of language their artistic expressions the way their imaginations grow and how they build deep emotional bonds to stretch the boundaries of their small worlds Rather than clutter their worlds with more and more stuff sometimes the wisest course for us is to learn how to get out of their way Christakis s message is energizing and reassuring young children are inherently powerful and they and their parents will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood revealing a place that s rich with possibility
