Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Gerard Cohen, Teo Mora, 1993-04-20 Researchers may find themselves confronted with proteases either because they play an essential role in a particular process they are studying or because they interfere with that process In either case they may need to investigate or inhibit the proteolytic activity Others may wish to use proteolytic enzymes as laboratory tools This book has been written with these investigators in mind and includes assay methods using natural and artificial substrates genetic based assays and strategies for the inhibition purification and crystallization of proteases In selected chapters the use of proteolytic enzymes to analyze proteins segregate cells or in peptide synthesis is covered

Mathematical Theory of Scattering Resonances Semyon Dyatlov, Maciej Zworski, 2019-09-10 Scattering resonances generalize bound states eigenvalues for systems in which energy can scatter to infinity A typical resonance has a rate of oscillation just as a bound state does and a rate of decay Although the notion is intrinsically dynamical an elegant mathematical formulation comes from considering meromorphic continuations of Green's functions The poles of these meromorphic continuations capture physical information by identifying the rate of oscillation with the real part of a pole and the rate of decay with its imaginary part An example from mathematics is given by the zeros of the Riemann zeta function they are essentially the resonances of the Laplacian on the modular surface The Riemann hypothesis then states that the decay rates for the modular surface are all either or An example from physics is given by quasi normal modes of black holes which appear in long time asymptotics of gravitational waves This book concentrates mostly on the simplest case of scattering by compactly supported potentials but provides pointers to modern literature where more general cases are studied It also presents a recent approach to the study of resonances on asymptotically hyperbolic manifolds The last two chapters are devoted to semiclassical methods in the study of resonances

the theory of Macdonald Koornwinder polynomials for proving bounded Littlewood identities Our approach provides an  
alternative to Macdonald s partial fraction technique and results in the first examples of bounded Littlewood identities for  
Macdonald polynomials These identities which take the form of decomposition formulas for Macdonald polynomials of type  $R$   
 $S$  in terms of ordinary Macdonald polynomials are  $q$   $t$  analogues of known branching formulas for characters of the
