Comprehensive Materials Finishing M.S.J. Hashmi, 2016-08-29. Finish Manufacturing Processes are those final stage processing techniques which are deployed to bring a product to readiness for marketing and putting in service. Over recent decades a number of finish manufacturing processes have been newly developed by researchers and technologists. Many of these developments have been reported and illustrated in existing literature in a piecemeal manner or in relation only to specific applications. For the first time, Comprehensive Materials Finishing Three Volume Set integrates a wide body of this knowledge and understanding into a single comprehensive work. Containing a mixture of review articles, case studies and research findings resulting from R Finish Machining Processes by which a small layer of material is removed from the surface by various machining processes to render improved surface characteristics and Surface Coating Processes by which the surface properties are improved by adding fine layers of materials with superior surface characteristics. Each of these primary finishing processes is presented in its own volume for ease of use, making Comprehensive Materials Finishing an essential reference source for researchers and professionals at all career stages in academia and industry. Provides an interdisciplinary focus allowing readers to become familiar with the broad range of uses for materials finishing. Brings together all known research in materials finishing in a single reference for the first time. Includes case studies that illustrate theory and show how it is applied in practice.
