

Annotated Final Exam Answers

ASHI ACLS™

ydfoim

Q&A: Given a patient situation, 1) identify the patient experiencing a cardiac dysrhythmia as asymptomatic, symptomatic but stable, symptomatic but unstable, or pulseless. 2) Describe the ECG characteristics, and 3) initial emergency care for cardiac arrest rhythms.

2. **C** While vasopressors, such as epinephrine and vasopressin, are used in the management of asystole, administration of antiarrhythmics (such as amiodarone and lidocaine) are not used in the management of symptomatic bradycardias, but is no longer used in the management of adult cardiac arrest. Defibrillation is not indicated in the management of asystole.

Q&A: Given a patient situation, 1) identify the patient experiencing a cardiac dysrhythmia as asymptomatic, symptomatic but stable, symptomatic but unstable, or pulseless. 2) Describe the ECG characteristics, and 3) initial emergency care for cardiac arrest rhythms.

3. **A** The Chain of Survival represents the ideal series of events that should take place immediately following the recognition of onset of sudden illness. Following these steps gives the victim the best chance of surviving a heart attack or sudden cardiac arrest. Because time is critical when dealing with a victim of sudden cardiac death, a weak or missing link in the Chain of Survival can reduce the likelihood of a positive outcome. Ventricular fibrillation and pulseless ventricular tachycardia are shockable cardiac arrest rhythms. When a cardiac arrest is witnessed and the patient's heart rhythm is VF, the patient's survival rate decreases 7% to 10% per minute until defibrillation if no CPR is provided. The decrease in survival rates is less rapid (averaging 3% to 4% per minute from collapse to defibrillation) when bystander CPR is provided. Generally, chest compressions should be the initial action performed instead of opening the airway or giving ventilations when starting CPR in victims of sudden cardiac arrest. Performing chest compressions before ventilations enables better delivery of the oxygen that is already present in the lungs and arterial circulation to the heart and brain.

Q&A: Given a patient situation, 1) identify the patient experiencing a cardiac dysrhythmia as asymptomatic, symptomatic but stable, symptomatic but unstable, or pulseless. 2) Describe the ECG characteristics, and 3) initial emergency care for cardiac arrest rhythms.

4. **D** The rhythm shown is monomorphic ventricular tachycardia at a rate of about 214/min.

Q&A: Given a patient situation, 1) identify the patient experiencing a cardiac dysrhythmia as asymptomatic, symptomatic but stable, symptomatic but unstable, or pulseless. 2) Describe the ECG characteristics, and 3) initial emergency care for wide-QRS tachycardia.

5. **B** The patient is symptomatic (palpitations) but stable.

Q&A: Given a patient situation, 1) identify the patient experiencing a cardiac dysrhythmia as asymptomatic, symptomatic but stable, symptomatic but unstable, or pulseless. 2) Describe the ECG characteristics, and 3) initial emergency care for wide-QRS tachycardia.
