Lee, 2007-07-27 This highly useful book contains methodology for the analysis of data that arise from multiscale processes It brings together a number of recent developments and makes them accessible to a wider audience Taking a Bayesian approach allows for full accounting of uncertainty and also addresses the delicate issue of uncertainty at multiple scales These methods can handle different amounts of prior knowledge at different scales as often occurs in practice

Multiscale Modeling Marco A.R. Ferreira, Herbert K.H. Lee, 2007-07-17 A wide variety of processes occur on multiple scales either naturally or as a consequence of measurement This book contains methodology for the analysis of data that arise from such multiscale processes The book brings together a number of recent developments and makes them accessible to a wider audience Taking a Bayesian approach allows for full accounting of uncertainty and also addresses the delicate issue of uncertainty at multiple scales The Bayesian approach also facilitates the use of knowledge from prior experience or data and these methods can handle different amounts of prior knowledge at different scales as often occurs in practice

Statistical Learning from a Regression Perspective Richard A. Berk, 2008-06-14 Statistical Learning from a Regression Perspective considers statistical learning applications when interest centers on the conditional distribution of the response variable given a set of predictors and when it is important to characterize how the predictors are related to the response As a first approximation this is can be seen as an extension of nonparametric regression Among the statistical learning procedures examined are bagging random forests boosting and support vector machines Response variables may be quantitative or categorical Real applications are emphasized especially those with practical implications One important theme is the need to explicitly take into account asymmetric costs in the fitting process For example in some situations false positives may be far less costly than false negatives Another important theme is to not automatically cede modeling decisions to a fitting algorithm In many settings subject matter knowledge should trump formal fitting criteria Yet another important theme is to appreciate the limitation of one's data and not apply statistical learning procedures that require more than the data can provide The material is written for graduate students in the social and life sciences and for researchers who want to apply statistical learning procedures to scientific and policy problems Intuitive explanations and visual representations are prominent All of the analyses included are done in R **Modeling Spatio-Temporal Data** Marco A. R. Ferreira, 2024-11-29 Several important topics in spatial and spatio temporal statistics developed in the last 15 years have not received enough attention in textbooks Modeling Spatio Temporal Data Markov Random Fields Objectives Bayes and Multiscale Models aims to fill this gap by providing an overview of a variety of recently proposed approaches for the analysis of spatial and spatio

temporal datasets including proper Gaussian Markov random fields dynamic multiscale spatio temporal models and objective priors for spatial and spatio temporal models The goal is to make these approaches more accessible to practitioners and to stimulate additional research in these important areas of spatial and spatio temporal statistics Key topics Proper Gaussian Markov random fields and their uses as building blocks for spatio temporal models and multiscale models Hierarchical models with intrinsic conditional autoregressive priors for spatial random effects including reference priors results on fast computations and objective Bayes model selection Objective priors for state space models and a new approximate reference prior for a spatio temporal model with dynamic spatio temporal random effects Spatio temporal models based on proper Gaussian Markov random fields for Poisson observations Dynamic multiscale spatio temporal thresholding for spatial clustering and data compression Multiscale spatio temporal assimilation of computer model output and monitoring station data Dynamic multiscale heteroscedastic multivariate spatio temporal models The M open multiple optima paradox and some of its practical implications for multiscale modeling Ensembles of dynamic multiscale spatio temporal models for smooth spatio temporal processes The audience for this book are practitioners researchers and graduate students in statistics data science machine learning and related fields Prerequisites for this book are master s level courses on statistical inference linear models and Bayesian statistics This book can be used as a textbook for a special topics course on spatial and spatio temporal statistics as well as supplementary material for graduate courses on spatial and spatio temporal modeling
