Creating Homes That Sustain Our Lives, Economy, and the Earth Dr. John H. Fitch, 2020-03-23 Would you like to live in a comfortable well insulated sustainable home that costs no more to build than a conventional home Would you like this home to be capable of providing its own heating and cooling systems with utilities bills of less than 10 % per month compared to what they would cost in a conventional home Would you like the energy used for heating cooling lighting and cooking to be from renewable sources such as the sun and or wind that are available right on your property Would you like to be able to sell your unused power back to the electric grid Would you like to know that the comfortable sustainable home in which you are living is sustaining your pocketbook And finally would you like to know that your home is also helping to sustain the Earth by using non polluting renewable energy sources and building materials If you answer yes to even one of these questions you should read this book I know this sounds too good to be true That is exactly how I felt when I first became interested in sustainable homes As a scientist I am by no means a person with the skills necessary to build such a home But as I discovered more about sustainable homes and their advantages I decided I had to try having a sustainable home built for myself I also learned you can build sustainably no matter whether you are in town in suburbia or in a rural area I am writing this book for several audiences First if you are interested in any or all of the benefits of sustainable homes this book is definitely for you It will give you information on available sustainable technologies how to select an appropriate area in which to build and a site in that area that would be good for building how to select a good architect a knowledgeable engineer a reliable sustainable builder and crew how to obtain financing how to work with inspectors and how to integrate different sustainable technologies and equipment into the home This book will also be helpful to people who are considering

joining the growing sustainability infrastructure of architects loan officers engineers builders building suppliers computer engineers and natural landscape experts These experts are creating the foundation for a sustainable construction industry This is a new exciting and expanding cooperative of experts who enjoy innovative and challenging opportunities The sustainability approach allows us to integrate and balance environmental economic and societal considerations **A**

PREFACE THE Author of this very practical treatise on Scotch Loch Fishing desires clearly that it may be of use to all who had it He does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible Everything in the way of the history and habits of fish has been studiously avoided and technicalities have been used as sparingly as possible The writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general This section is interleaved with blank sheets for the readers notes The Author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition We do not pretend to write or enlarge upon a new subject Much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written Far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that on the whole a days loch fishing is the most convenient One great matter is that the loch fisher is depend ent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead Providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best A common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from

the bow of the same boat Of all the absurd beliefs as to loch fishing this is one of the most absurd Try it Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky Of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance Again it is said that the boatman has as much to do with catching trout in a loch as the angler Well we dont deny that In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing
