raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present. Headed your way over the coming decades, new biotechnologies that can powerfully alter your body and mind. Cognitive enhancement through chemical or bioelectronic means, the rough equivalent of doubling or tripling IQ scores. Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime: body shape, athletic ability, intelligence, personality. Bioelectronic devices for modulating your own brain processes, including your pleasure centers, a potentially non-stop high. Direct control of machines by thought and perhaps direct communication with other people, brain-to-brain, a new dimension of sharing and intimacy. But some of the potential consequences are also alarming. A growing rift between the biologically enhanced and those who can't afford such modifications. A constant cycle of upgrades and boosts as the bar of normal rises ever higher. Humans 95, Humans XP, Humans 8. The fragmentation of humankind into rival bioenhancement clusters. A gradually blurring boundary between person and product. Extreme forms of self-modification with some individuals no longer recognized as unambiguously human.
