## **Gauss Exam 2013 Trial:**

**Decision Making under Uncertainty** Kerstin Preuschoff, Peter N. C. Mohr, Ming Hsu, 2015-06-16 Most decisions in life are based on incomplete information and have uncertain consequences To successfully cope with real life situations the nervous system has to estimate represent and eventually resolve uncertainty at various levels A common tradeoff in such decisions involves those between the magnitude of the expected rewards and the uncertainty of obtaining the rewards For instance a decision maker may choose to forgo the high expected rewards of investing in the stock market and settle instead for the lower expected reward and much less uncertainty of a savings account Little is known about how different forms of uncertainty such as risk or ambiguity are processed and learned about and how they are integrated with expected rewards and individual preferences throughout the decision making process With this Research Topic we aim to provide a deeper and more detailed understanding of the processes behind decision making under uncertainty **TMS 2013 142nd Annual**

**of Response-Adaptive Randomization in Clinical Trials** Feifang Hu, William F. Rosenberger, 2006-09-29 Presents a firm mathematical basis for the use of response adaptive randomization procedures in practice The Theory of Response Adaptive Randomization in Clinical Trials is the result of the authors ten year collaboration as well as their collaborations with other researchers in investigating the important questions regarding response adaptive randomization in a rigorous mathematical framework Response adaptive allocation has a long history in biostatistics literature however largely due to the disastrous ECMO trial in the early 1980s there is a general reluctance to use these procedures This timely book represents a mathematically rigorous subdiscipline of experimental design involving randomization and answers fundamental questions including How does response adaptive randomization affect power Can standard inferential tests be applied following response adaptive randomization What is the effect of delayed response Which procedure is most appropriate and how can most appropriate be quantified How can heterogeneity of the patient population be incorporated Can response adaptive randomization be performed with more than two treatments or with continuous responses The answers to these questions communicate a thorough understanding of the asymptotic properties of each procedure discussed including asymptotic normality consistency and asymptotic variance of the induced allocation Topical coverage includes The relationship between power and response adaptive randomization The general result for determining asymptotically best procedures Procedures based on urn models Procedures based on sequential estimation Implications for the practice of clinical trials Useful for graduate students in mathematics statistics and biostatistics as well as researchers and industrial and academic biostatisticians this book offers a rigorous treatment of the subject in order to find the optimal procedure to use in practice

Visual Dysfunction in Schizophrenia: A View into the Mechanisms of Madness? Randolph Blake, Steven Silverstein, Brian P. Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination For example the directional relationships between perceptual and cognitive disturbances e g in attention memory executive function predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored In addition few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual exploration which can provide important data on functioning of the perception for action pathway Relatedly studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristics of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition An additional important area involves treatment of visual disturbances in schizophrenia Two major questions regarding this are 1 can visual processing be improved in cases

where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2 what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia Other important and understudied questions concern 1 the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse treatment response and or recovery 2 the potential role of visual functioning in diagnosing and predicting illness 3 the extent to which some visual perception disturbances are diagnostically specific to schizophrenia and 4 the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics electroencephalography neuroimaging computational and animal models and other methods reviews hypotheses theories opinion methods areas of impact and historical perspectives

**Perceiving and Acting in the Real World: From Neural Activity to Behavior** Simona Monaco,Gavin Buckingham,Irene Sperandio,J.Douglas Crawford,2016-12-07 One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just

a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies

**Underlying Action and Perception** Daya Shankar Gupta, Andreas Bahmer, 2021-10-20      **Philosophy and Psychology of Time** Bruno Mölder, Valtteri Arstila, Peter Øhrstrøm, 2015-11-02 This book is an edited collection of papers from international experts in philosophy and psychology concerned with time The collection aims to bridge the gap between these disciplines by focussing on five key themes and providing philosophical and psychological perspectives on each theme The first theme is the concept of time The discussion ranges from the folk concept of time to the notion of time in logic philosophy and psychology The second theme concerns the notion of present in the philosophy of mind metaphysics and psychology The third theme

relates to continuity and flow of time in mind One of the key questions in this section is how the apparent temporal continuity of conscious experience relates to the possibly discrete character of underlying neural processes The fourth theme is the timing of experiences with a focus on the perception of simultaneity and illusions of temporal order Such effects are treated as test cases for hypotheses about the relationship between the subjective temporal order of experience and the objective order of neural events The fifth and the final theme of the volume is time and intersubjectivity This section examines the role of time in interpersonal coordination and in the development of social skills The collection will appeal to both psychologists and philosophers but also to researchers from other disciplines who seek an accessible overview of the research on time in psychology and philosophy
