Penney, 1990 **Geometry of Black Holes** Piotr T. Chruściel, 2020-07-31 Black holes present one of the most fascinating predictions of Einstein's general theory of relativity There is strong evidence of their existence through observation of active galactic nuclei including the centre of our galaxy observations of gravitational waves and others There exists a large scientific literature on black holes including many excellent textbooks at various levels However most of these steer clear from the mathematical niceties needed to make the theory of black holes a mathematical theory Those which maintain a high mathematical standard are either focused on specific topics or skip many details The objective of this book is to fill this gap and present a detailed mathematically oriented extended introduction to the subject The book provides a wide background to the current research on all mathematical aspects of the geometry of black hole spacetimes **Molecular Theory Of Water And Aqueous Solutions - Part 1: Understanding Water** Arieh Ben-naim, 2009-07-17 The aim of this book is to explain the unusual properties of both pure liquid water and simple aqueous solutions in terms of the properties of single molecules and interactions among small numbers of water molecules It is mostly the result of the author's own research spanning over 40 years in the field of aqueous solutions An understanding of the properties of liquid water is a prelude to the understanding of the role of water in biological systems and for the evolution of life The book is targeted at anyone who is interested in the outstanding properties of water and its role in biological systems It is addressed to both students and researchers in chemistry physics and biology **Modern Geometry— Methods and Applications** B.A. Dubrovin, A.T. education The standard courses in the classical differential geometry of curves and surfaces which were given instead and still are given in some places have come gradually to be viewed as anachronisms However there has been hitherto no unanimous agreement as to exactly how such courses should be brought up to date that is to say which parts of modern geometry should be regarded as absolutely essential to a modern mathematical education and what might be the appropriate level of abstractness of their exposition The task of designing a modernized course in geometry was begun in 1971 in the mechanics division of the Faculty of Mechanics and Mathematics of Moscow State University The subject matter and level of abstractness of its exposition were dictated by the view that in addition to the geometry of curves and surfaces the following topics are certainly useful in the various areas of application of mathematics especially in elasticity and relativity to name but two and are therefore essential the theory of tensors including covariant differentiation of them Riemannian curvature geodesics and the calculus of variations including the conservation laws and Hamiltonian formalism the particular case of skew symmetric tensors i e
