International Conference on Hand-Arm Vibration Deutsche Gesetzliche Unfallversicherung (DGUV), 2019-05-30 In May 2019 the Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung IFA was hosting the 14th International Conference on Hand Arm Vibration. The event is organised every four years under the auspices of international expert bodies at changing places. It is aimed at all stakeholders in the subject whether experts from the occupational safety and health and research communities or management personnel in the areas of manufacture and design. Mechanized manual work is often associated with exposure to vibration that may impact adversely upon the health and well being of the affected individuals. Besides impairments to comfort and performance harm to the hand arm system possibly permanent must be prevented as a matter of priority. In a world of work that is becoming more and more complex combined exposures are also becoming increasingly relevant. What influence does hand arm vibration have in conjunction with noise or whole body vibration? What contribution can be made by medicine diagnostics epidemiology measurement technology and prevention to the identification and containment of risks and better still to their elimination? What is the role of international regulatory activity in this context? The 14th International Conference on Hand Arm Vibration aimed to address these and many other questions concerning hand arm vibration and to find answers relevant to the field.

Body Integrity Dysphoria and the Ethical Dilemma of On-Demand Amputation Leandro Loriga,2025-02-05 This book explores the complex moral and ethical dilemmas surrounding Body Integrity Dysphoria BID and its recent classification in the ICD 11 The examination offers a pioneering view into a condition that remains deeply controversial within medical and public discourse BID is characterised

by a persistent desire to acquire a physical impairment often through amputation. Such a situation forces the medical world to take a stance by either granting the amputation request or rejecting it with the risk of pushing individuals toward self-made solutions. Through a review of the contemporary understanding of BID as well as original data obtained during extensive fieldwork with medical professionals, this book addresses the ethical and moral aspects of the condition. Fundamental questions are posed about the relationship between bodily autonomy and embodiment, identity and gender, well-being and moral responsibility, and how these elements intertwine, shape and are shaped by sociocultural understanding of illness and body. The book aims to move beyond traditional understandings of body functionality to consider the implications of autonomy and the extent to which an individual considered mentally and physically sound can dispose of one's own body within the contemporary medical paradigm. This is done to question long-standing assumptions about bodily integrity and traditional views on the wholeness and naturalness of the human form. As postmodern theories challenge established frameworks, a paradigm shift emerges in medical and societal approaches to identity, embodiment, and impairment, and this needs to be addressed. Drawing on insights from medicine, psychology, sociology, and ethics, this book situates BID within a broader cultural and philosophical context. It raises essential questions about where individuals' rights intersect with medical responsibility and societal perceptions of normalcy and health. By doing so, the book provokes readers to reconsider the boundaries between health, pathology, and self-determination.

, 2005 Role of Inner Ear in Self and Environment Perception Alexis Bozorg Grayeli, Christophe Lopez, Christian Van Nechel, Michel Toupet, 2020-03-11 **Neuro-Education and Neuro-Rehabilitation** Eduardo Martínez-Montes, Julie Chobert, Mireille Besson, 2016-11-04

In the last decade, important discoveries have been made in cognitive neuroscience regarding brain plasticity and learning, such as the mirror neurons system and the anatomical functional organization of perceptual, cognitive, and motor abilities. Time has come to consider the societal impact of these findings. The aim of this Research Topic of Frontiers in Psychology is to concentrate on two domains: neuro-education and neuro-rehabilitation. At the interface between neuroscience, psychology, and education, neuro-education is a new interdisciplinary, emerging field that aims at developing new education programs based on results from cognitive neuroscience and psychology. For instance, brain-based learning methods are flourishing, but few have been rigorously tested using well-controlled procedures. Authors of this Research Topic will present their latest findings in this domain using rigorously controlled experiments. Neuro-rehabilitation aims at developing new rehabilitation methods for children and adults with learning disorders. Neuro-rehabilitation programs can be based upon a relatively low number of patients and controls or on large clinical trials to test for the efficiency of new treatments. These projects may also aim at testing the efficiency of video games and of new methods such as Transcranial Magnetic Stimulation (TMS) for therapeutic interventions in children or adolescents with learning disabilities. This Research Topic will

bring together neuroscientists interested in brain plasticity and the effects of training psychologists working with adults as well as with normally developing children and children with learning disabilities as well as education researchers directly confronted with the efficiency of education programs The goal for each author is to describe the state of the art in his her specific research domain and to illustrate how her his research findings can impact education in the classroom or rehabilitation of children and adolescents with learning disorders
