Immunoglobulin Therapy in the 21st Century: The Dark Side of the Moon Isabella Quinti, Marcella Visentini, Albert Farrugia, 2015-11-20

In the early decades since the introduction in the early 80s of immunoglobulin therapy, many studies tried to identify which clinical indications might benefit from the therapy, which treatment's schedules are effective and safe. It is universally accepted that immunoglobulin therapy is a life-saving treatment in patients with PID. The rise of new indications for further different clinical conditions resulted in a steady increase in demand for immunoglobulins. Currently, the consumption of immunoglobulin for PID represents a small fraction of the market. In the recent past, we have been observing:

1. An increase in the demand for plasma and in the consequent need to increase the number of donors
2. Changes in methods to improve IgG recovery and to increase productivity as a response to growing clinical demand
3. Introduction of immunoglobulin treatments with higher concentration
4. Changes in the timing of administration with an increase in the rate of infusion
5. Introduction of immunoglobulin treatment administered subcutaneously, mainly confined initially to patients with PID and later extended to other clinical indications which often require higher volumes of infusion.

Doctors following patients with PID were initially alarmed only to a possible risk of shortage. More relevant and less discussed appear the possible consequences of:

1. the risk of an improper transfer of information on treatments from a clinical indication to another. In particular, the idea of a mere replacement function in patients with PID might possibly be borrowed from the model of other clinical conditions requiring a replacement, such as haemophilia. In PID, immunoglobulin treatment instead is obviously replacing a missing feature. However, other immune alterations are responsible for the large number of PID-associated diseases, including inflammatory manifestations and tumors, common causes of morbidity and mortality. The immunomodulatory effects of immunoglobulin administered at replacement dosages on multiple cells and immune system functions are still largely to be checked in *in vitro* studies and *in vivo*.
2. the changes in the immunoglobulin production and schedules of administration. These should have been assessed in studies of drug surveillance necessary in order to evaluate on large numbers of what it is initially reported on patients enrolled in the pivotal clinical trials, usually in the absence of most of the main disease-associated clinical conditions affecting pharmacokinetics, efficacy and tolerability. Severe side effects are now more frequently reported. This requires surveillance studies in order to verify the tolerability. Nowadays, personalized health research presents methodologic challenges since emphasis is placed on the individual response rather than on the population. Even within a universally accepted indication, such as in PID, the identification of prognostic markers should guide the therapeutic intervention.
3. the risk of a decrease in the surveillance and monitoring of PID-associated clinical conditions. In fact, self-administration of

immunoglobulins administered subcutaneously increased the independence of a number of patients On the other hand it led to the reduction in the number of contacts between specialized centers and patients who often require a close monitoring of disease associated conditions A wide debate between experts is necessary to afford the new challenge on immunoglobulin usage

Immunomodulation by Intravenous Immunoglobulin A. Morell,E. Rewald,1993-07-15 This work provides a comprehensive review of the role of intravenous immunoglobulins in a wide range of immune related diseases Over 20 research workers from America and Europe together examine many important aspects of this subject and in particular assess the role of immunoglobulins in the treatment of asthma and allergy autoimmune disorders juvenile arthritis and recurrent pregnancy loss

Plumer's Principles and Practice of Infusion Therapy Sharon M. Weinstein,Mary E. Hagle,2014-04-02 The Ninth Edition of Plumer s Principles and Practice of Infusion Therapy provides clear concise coverage of basic and advanced infusion procedures Rely on this new edition for the most current coverage of intravenous therapy function procedures standards and equipment along with practical new features and emphasis on safety considerations as well as evidence based practice The book begins with an overview of IV therapy including how to minimize risk and enhance performance and then addresses assessment and monitoring clinical decision making patient specific therapies and infusion therapy for children the elderly and across the continuum of care

Immunological Screening and Immunotherapy in Critically ill Patients with Abdominal Infections Eugen Faist,2012-12-06 Over two decades an abundance of knowledge has been accumulated focus ing on the understanding of the molecular and cellular pathomechanisms of stressful conditions like systemic inflammation and sepsis We have learned that there is a clear correlation between the magnitude of the inciting traumatic event and the degree of inflammatory dysbalance The immunoinflammatory disintegration comprises a simultaneous collapse of the otherwise very smoothly balanced pro and antiinflammatory vectors of cytokine regulation Most recently we understood that it is predominantly the dysregulation of antiinflammatory mediators that plays a pivotal role for the phenomenon of trauma induced depression or paralysis of cell mediated immune responses The substantial intellectual and logistic investments of numerous investi gators towards understanding the biology of sepsis inevitably lead us towards a rewarding status in terms of reaching spheres of clinical relevance From the evolutionary collection of a multitude of ex vivo and in vivo immuno mechanistic parameters some were found to represent most significant bio logical markers to support the clinician to characterize better the severity of inflammatory illness and to predict outcome Chapter one of this book authored by G Grass and E A M Neugebauer analyses elegantly our current knowledge on the assessment of the immuno logical status in terms of risk and prognosis of sepsis

Markert,2005-01-01 This book provides an overview of the current knowledge of physiological and pathological immune reactions which favor or disturb fertility The regulation of embryo implantation and trophoblast invasion through cytokines growth factors and other pregnancy related immunoregulatory molecules is described in detail Autoimmunity and allergy are presented as possible causes of reproductive failure *Journal of Korean Medical Science* ,2001 *Current Issues and Future Direction in Kidney Transplantation* Thomas Rath,2013-02-13 The here presented book covers different areas of clinical and scientific interest reaching from donor evaluation to newest methods in immunological diagnostics But also aspects of daily care of transplant recipients can be found in the carefully selected chapters Everything driven by the aim to improve the care for all of our transplanted patients **Recurrent Pregnancy Loss** Howard J A Carp,2025-10-14 This edition like the previous editions of this successful text tries to summarize the controversies and discuss the scientific basis for various causes of recurrent pregnancy loss in depth and to clarify the various treatment modalities Much of the controversy that previously seemed to have been settled in many areas of recurrent pregnancy loss has now returned again particularly regarding the use of progestogens PGT A F filgrastim and anticoagulants giving this new edition new relevance Also included here are the continuing advances in genetics and immunomodulation and the text includes discussion of the roles of evidence based medicine and personalized medicine and the treatment of the resistant patient Both general gynaecologists and specialists in recurrent pregnancy loss will find this a helpful reference for their approach to patients FROM REVIEWS OF PREVIOUS EDITIONS a leading team successfully reviews the controversies surrounding each topic Essential reading for any physician counseling or treating women with recurrent pregnancy loss European Gynecology Obstetrics needed logically organized and balanced a welcome reference Fertility Sterility **Blood, Plasma, and Plasma Proteins** José Luis Valverde,2006 Labile blood products and plasma derived products are very sensitive form a social viewpoint Along with the challenges faced by all medicinal products there is an added challenge due to the lack of raw material and the social problems with regards to their acquisition Obtaining them depends on blood and plasma donations which are insufficient Europeans as a whole fail to even cover 40 % of their needs in plasma for fractionation The aspiration that all donations shall be voluntary free and unpaid is an altruistic objective which reality unfortunately contradicts every day Governments and all social Agencies should promote to the maximum its actions in order to achieve the greatest number of donation each day Even from a humanitarian or ethical viewpoint nobody can deny a

possible donor accepting incentives This incentive discussion plus the concept of self sufficiency of countries and more are discussed in this volume
