

GENERAL DESCRIPTION

On machines fitted with this system all the loader actions are controlled by a single lever **A** which operates an electro - hydraulic, proportional control valve block **B**, mounted on the boom pivot plate.

As an extra option, the loader raise/lower and extend/retract movements (but not tilt) can also be controlled by remote levers **C** on a boom-mounted man platform. Machines with this option are also provided with a hand throttle **D**.

The speed of loader actions is proportional to the degree of lever movement (as well as engine speed). The auxiliary service, when provided, is operated by a rocker switch and does not have proportional control.

Machines with servo controls also have a modified Safe Load Indicator, which automatically prevents the loader being moved into an unstable condition. As a further safety measure, machines with the remote facility are also provided with an emergency stop button on the man platform. This cuts off all electrical power to the system and also de-energises a dump valve **E**. When the dump valve is de-energised, the hydraulic pressure in the valve block is reduced to a level which is insufficient to operate the system. In this condition, the loader can be manually retracted and lowered by means of levers on the valve block (provided the dump valve is manually held closed).

The system electrical relays are located in a terminal box **F** (530B - HL) or **G** (525B - HL).

The valves and terminal block **F** are protected by a cover assembly which incorporates access panels for the control valve hand levers and the dump valve.
