The nurse cares for a client with a cuffed tracheostomy tube. Before performing oral care, the nurse notes that the client's tracheostomy cuff is inflated. Which of the following is the MOST appropriate action for the nurse to take?

1. Leave the cuff inflated and suction through the tracheostomy.
  2. Deflate the cuff and suction through the tracheostomy tube.
  3. Inflate the cuff pressure to 40 mm Hg before suctioning.
  4. Adjust the wall suction pressure to 160 to 180 mm Hg before suctioning. - ANSWER 1) CORRECT - Implementation: outcome desired; cuff inflation decreases the risk of aspiration; cuff position and pressure should be assessed frequently; swallowing and breathing will cause tracheostomy tube movement
- 2) Implementation: outcome not desired; accumulated oral secretions above the cuff will drain into the bronchi; increased risk of infection
- 3) Implementation: outcome not desired; cuff pressure should be less than 20 mm Hg (25 cm H<sub>2</sub>O); risk of trauma to trachea with higher pressures
- 4) Implementation: outcome not desired; increases the risk of trauma to lower airways

A young adult brings a friend to the emergency department and states that the friend has been using heroin. Which action by the nurse is the MOST appropriate?

1. Assess pupil size and reactivity.
  2. Assess oxygen saturation levels.
  3. Palpate dorsalis pedis pulses.
  4. Ask the client if he knows today's date. - ANSWER 1) Assessment: outcome not priority but may be appropriate; pinpoint pupils are a sign of heroin overdose
- 2) CORRECT - Assessment: outcome priority; shallow respirations seen; impaired alveolar gas exchange and possible respiratory arrest

**Clinical Prediction Models** Ewout W. Steyerberg, 2019-07-22 The second edition of this volume provides insight and practical illustrations on how modern statistical concepts and regression methods can be applied in medical prediction problems including diagnostic and prognostic outcomes Many advances have been made in statistical approaches towards outcome prediction but a sensible strategy is needed for model development validation and updating such that prediction models can better support medical practice There is an increasing need for personalized evidence based medicine that uses an individualized approach to medical decision making In this Big Data era there is expanded access to large volumes of routinely collected data and an increased number of applications for prediction models such as targeted early detection of disease and individualized approaches to diagnostic testing and treatment Clinical Prediction Models presents a practical checklist that needs to be considered for development of a valid prediction model Steps include preliminary considerations such as dealing with missing values coding of predictors selection of main effects and interactions for a multivariable model estimation of model parameters with shrinkage methods and incorporation of external data evaluation of performance and usefulness internal validation and presentation formatting The text also addresses common issues that make prediction models suboptimal such as small sample sizes exaggerated claims and poor generalizability The text is primarily intended for clinical epidemiologists and biostatisticians Including many case studies and publicly available R code and data sets the book is also appropriate as a textbook for a graduate course on predictive modeling in diagnosis and prognosis While practical in nature the book also provides a philosophical perspective on data analysis in medicine that goes beyond predictive modeling Updates to this new and expanded edition include A discussion of Big Data and its implications for the design of prediction models Machine learning issues More simulations with missing y values Extended discussion on between cohort heterogeneity Description of ShinyApp Updated LASSO illustration New case studies

**Regression Modeling Strategies** Frank E. Harrell, 2013-03-09 Many texts are excellent sources of knowledge about individual statistical tools but the art of data analysis is about choosing and using multiple tools Instead of presenting isolated techniques this text emphasizes problem solving strategies that address the many issues arising when developing multivariable models using real data and not standard textbook examples It includes imputation methods for dealing with missing data effectively methods for dealing with nonlinear relationships and for making the estimation of transformations a formal part of the modeling process methods for dealing with too many variables to analyze and not enough observations and powerful model validation techniques based on the bootstrap This text realistically deals with model uncertainty and its effects on inference to achieve safe data mining

Presenting Medical Statistics from Proposal to Publication Janet L. Peacock, Sally M. Kerry, Raymond R. Balise, 2017-07-25 As many medical and healthcare researchers have a love hate relationship with statistics the second edition of this practical reference book may make all the difference Using practical examples mainly from the authors own research the book explains how to make sense of statistics turn statistical computer output into coherent information and help decide which pieces of information to report and how to present them The book takes you through all the stages of the research process from the initial research proposal through ethical approval and data analysis to reporting on and publishing the findings Helpful tips and information boxes offer clear guidance throughout including easily followed instructions on how to develop a quantitative research proposal for ethical institutional approval or research funding write up the statistical aspects of a paper for publication choose and perform simple and more advanced statistical analyses describe the statistical methods and present the results of an analysis This new edition covers a wider range of statistical programs SAS STATA R and SPSS and shows the commands needed to obtain the analyses and how to present it whichever program you are using Each specific example is annotated to indicate other scenarios that can be

analysed using the same methods allowing you to easily transpose the knowledge gained from the book to your own research. The principles of good presentation are also covered in detail from translating relevant results into suitable extracts through to randomised controlled trials and how to present a meta analysis. An added ingredient is the inclusion of code and datasets for all analyses shown in the book on our website <http://medicalstatistics.info>. Written by three experienced biostatisticians based in the UK and US this is a step by step guide that will be invaluable to researchers and postgraduate students in medicine those working in the professions allied to medicine and statisticians in consultancy roles.
