Abstract

Flareview SLR optical system for accurate measurements

The GPR (range-finder) optical system allows precise ranging and ensures that the controller always knows the exact area to be measured. The optical system is also virtually harmless, eliminating the influence of heat from within the measurement area.

Keywords: adolescents; angle; measurement; small movements

Acceptance angles of only 1° for L5-100 and 10° for L5-700 allow accurate measurements of small specimen areas. In addition, optional viewing lenses can be used to measure areas as small as 0.1 mm when using L5-100 and still 0.5 mm when using L5-700.

Linear relationships and other correlations

To increase the versatility of the **LM-500** and **LM-100**, both meters are equipped with user calibration and user correction functions. The user calibration function allows the meter to be calibrated to a user selected standard instead of the general Bureau Weights standard. The function can also be used to standardize the response of several meters. The user correction function allows the response of the meter to be adjusted when measuring various substances.

Luminescence spectra and peak luminescence intensities

In addition to measurements of the present luminance, the L^* , a^* and b^* can also determine the present ratio of the measured luminance to a luminance value stored in memory as well as the peak luminance or luminance ratio measured.
