Owners Workshop Manual space series which includes NASA Apollo 11 Manual and NASA Space Shuttle Manual this unique book provides an insight into the only car ever built to be driven on the surface of another world With a Foreword by the first Apollo astronaut to drive it on the Moon Dave Scott and published to coincide with the 40th anniversary of mankind's final drive on the Moon in December 2012 The book is part mechanical guide illustrated with many of the technical drawings from the time and part narrative driven story of engineering ingenuity and human triumph It draws on the rich NASA photographic archive and the complete transcripts of the crews reaction to driving across the Moon which the authors have an unparalleled knowledge and experience of working with

Moon Manual David M Harland, 2016-04-15 There is renewed interest in the Moon in recent years with the news that a Chinese lunar rover landed on the Moon in January 2014 and NASA announcing that it is looking for private partners to land a robot on the Moon's surface as the first step in a programme to exploit the commercial opportunities offered by the Moon Recent lunar expeditions by both orbiting spacecraft and landers have uncovered far more detail about the Moon's surface and geology including the trail of Neil Armstrong's first walk on the Moon in 1969 This manual explains in simple and straightforward terms with a wealth of illustrations and photographs what we have discovered about the Moon over the centuries along with a general overview of the vehicles involved in the exploration

Lem Lunar Excursion Module Familiarization Manual Grumman Aircraft Engineering Co., 2011-05 Designed by Grumman's brilliant Tom Kelly the Apollo Lunar Excursion Module or LEM for short was a triumph of purpose built engineering In the six years 1962-1968 between drawing board and first flight a myriad of challenges were overcome related to weight reliability and safety The final design designated the Lunar Module or LM boasted tiny windows instead of large portholes four legs instead of five and most famously had no seats instead relying on the astronauts legs to cushion a lunar landing Ten LMs made it into space including three flown in development and test missions and six which landed on the Moon A seventh famously saved the crew of Apollo 13 when that mission's Command Module suffered a catastrophic malfunction Originally created for NASA by Grumman in 1964 this LEM Familiarization Manual provides an operational description of all subsystems and major components of the lunar lander It includes sections about the LEM mission spacecraft structure operational subsystems prelaunch operations and ground support equipment

Apollo Lunar Roving Vehicle Operations Handbook Nasa, 2012 Developed in only 17 months at a cost of 38 million dollars the Lunar Roving Vehicle LRV greatly expanded the survey range of the astronauts on Apollo 15, 16 and 17 Designed to operate in the low gravity vacuum of the Moon the LRV boasted an ingenious design that allowed it to be folded up and stored inside the Lunar Module It would then be deployed using a system of pulleys and brake reels The LRV's frame was made of aluminum alloy 2219 tubing assemblies giving the vehicle a fairly small mass of 210kg but allowing it to carry up to 490kg on the lunar surface The LRV's lightweight tires

were made of zinc coated steel strands with titanium chevrons and aluminum hubs and offered a ground clearance of 36cm. The LRV featured two side by side foldable seats, a TV camera and a dish antenna. Four independent DC motors, one for each wheel, powered by two 36 volt batteries, provided maneuvering power. Both sets of wheels could be used to steer, although they could also be decoupled. For safety reasons, astronauts never drove the LRV a distance farther from the LM than they could safely walk. In the unlikely event that the rover failed, on each of the three day missions that it was employed, the LRV was used daily for three traverses. The longest was on Apollo 17 when it was driven 20.1km and it traveled a total of 35.9km on that mission. The total distance traveled by all three LRVs was 90.4km. Almost all of it was done without incident, although some damage to the fender extensions caused dust problems on Apollo 16 and 17. Harrison Schmitt of Apollo 17 praised the design and operation of the vehicle, saying the Lunar Rover proved to be the reliable, safe and flexible lunar exploration vehicle we expected it to be. Originally created for the astronauts by prime contractor Boeing, this Lunar Roving Vehicle Operations Handbook describes the LRV and its systems and details the deployment and driving procedures. It also details the 1 gravity LRV used to train astronauts on Earth. A lengthy appendix provides performance and other data. *Chilton's Chrysler Caravan and Voyager 1984-95 Repair Manual*, 1996 **Lunar Module LM 10 Thru LM 14**, 2012.
