Analyses on Health Status and Care Needs among Older Adults Jian Sun, Hongye Luo, Yi Zeng, 2025-09-12 Globally a shift in population structures and disease spectrum is inevitable The latest global burden of disease study revealed that the

average healthy life expectancy has steadily increased from 1990 to 2019 worldwide However there is a concerning trend in which the growth in healthy life expectancy is lower than the growth in life expectancy in 198 out of 204 countries evaluated This implies that people spend more time in sub optimal health despite living longer Moreover non communicable diseases contribute an increasingly significant portion of the disease burden in low and middle income countries growing from one third to almost two thirds from 1990 to 2019 This mainly results from preventable risk factors It is important to approach aging with a positive outlook This entails guaranteeing sufficient medical care and proactively managing health issues in older adults Importantly since several diseases are often irreversible prevention is key Social and psychological factors due to their nebulous harm have struggled to gain attention over a long period We should aim to make the additional years gained during old age as healthful as those in other life stages
