OPERATING INFORMATION

Rotary type cutters require high speed rotation of blades for efficient operation. Under no circumstances should spectators ever be permitted near this machine when it is in operation.

To operate, proceed as follows:

1. With tractor engine at low idle speed, place selector lever in engine PTO.
2. Raise the Cutter so that blades are free of material to be cut and slowly and carefully engage the PTO shift lever.

IMPORTANT: The jack shaft of the Cutter is equipped with a safety pin and shear pin for protection of operator and machine. If the shift lever is carelessly engaged, the

shear pin may break. Extreme care must be exercised in engaging the shift lever to prevent such breakage.

If the drive shaft is equipped with optional slip clutch, the same care should be used when engaging the PTO. If this type drive shaft is too quickly engaged, the slip clutch will ratchet. If ratcheting occurs, disengage the PTO immediately and wait until the drive comes to a complete stop. Then again engage the PTO, but more slowly.

3. Gradually increase tractor engine speed until PTO speed of 540 rpm has been reached. Then drive the Cutter into the working area.
