Manual Muscle Testing Occupational Therapy:

Occupational Therapy Manual for the Evaluation of Range of Motion and Muscle Strength Deanna Proulx, Donna Latella, 2024-09-30 Aimed at occupational therapy practitioners this practical and comprehensive manual demonstrates how different assessment tools can be used to evaluate the range of motion and strength of clients during physical rehabilitation. The book covers the key areas of evaluation that therapists need to understand including activity analysis, clinical observation, active range of motion, gross motor testing, goniometry, and isolated muscle testing. Reconfigured to match the clinical reasoning process, this new edition has also been reorganized by region and by joint motion to make it more user friendly, mirroring the process by which an evaluation is conducted in practice. Also included are various appendices to support the transition to practice as well as an At a Glance version of the manual itself. This is an essential manual for both occupational therapy practitioners and students in training.
