Motion Computing User Manual:

NATFREQ Users Manual Wilfred D. Iwan, 1984 This manual describes a computer program that has been developed to calculate natural frequencies and mode shapes of taut cables with attached masses and spring mass combinations The equations of motion are solved by an iterative technique allowing accurate calculation even for extremely high mode numbers The approach has the advantages that it is fast accurate and can easily accommodate a variety of system configurations including bodies attached to the cable This document covers the theory used in the development of the code Line by line descriptions of both the input and output data are given and several examples illustrating the use of the program are included Some of the difficulties that may be encountered when running large complex problems are discussed and possible solutions proposed The structure of the program is described in moderate detail The program is written in a style which makes additions or modifications easy to implement Author

Affective Computing and Intelligent Interaction Jianhua Tao, Tieniu Tan, Rosalind W. Picard, 2005-11-15 This volume contains the proceedings of the 1st International Conference on Affective Computing and Intelligent Interaction ACII 2005 held in Beijing China on 22-24 October 2005 Traditionally the machine end of human machine interaction has been very passive and certainly has had no means of recognizing or expressing affective information But without the ability to process such information computers cannot be expected to communicate with humans in a natural way The ability to recognize and express affect is one of the most important features of man beings We therefore expect that computers will eventually have to

have the ability to process affect and to interact with human users in ways that are similar to those in which humans interact with each other. Affective computing and intelligent interaction is a key emerging technology that focuses on myriad aspects of the recognition, understanding, and expression of affective and emotional states by computers. The topic is currently a highly active research area and is receiving increasing attention. This strong interest is driven by a wide spectrum of promising applications such as virtual reality, network games, smart surveillance, perceptual interfaces, etc. Affective computing and intelligent interaction is a multidisciplinary topic involving psychology, cognitive science, physiology, and computer science. ACII 2005 provided a forum for scientists and engineers to exchange their technical results and experiences in this fast-moving and exciting field. A total of 45 oral papers and 82 poster papers included in this volume were selected from 205 contributions submitted by researchers worldwide.

Computer Algebra in Scientific Computing

CASC 2001 Viktor G. Ganzha, Ernst W. Mayr, Evgenii V. Vorozhtsov, 2012-12-06. CASC 2001 continues a tradition started in 1998 of international conferences on the latest advances in the application of computer algebra systems to the solution of various problems in scientific computing. The three earlier CASCs (conferences in this sequence: CASC 98, CASC 99, and CASC 2000) were held in Petersburg, Russia; in Munich, Germany; and in Samarkand, respectively, in Uzbekistan, and proved to be very successful. We have to thank the program committee listed overleaf for a tremendous job in soliciting and providing reviews for the submitted papers. There were more than three reviews per submission on average. The result of this job is reflected in the present volume, which contains revised versions of the accepted papers. The collection of papers included in the proceedings covers various topics of computer algebra: methods, algorithms, and software applied to scientific computing. In particular, five papers are devoted to the implementation of the analysis of involutive systems with the aid of CASs. The specific examples include new efficient algorithms for the computation of Janet bases for monomial ideals, involutive division, involutive reduction method, etc. A number of papers deal with application of CASs for obtaining and validating new exact solutions to initial and boundary value problems for partial differential equations in mathematical physics. Several papers show how CASs can be used to obtain analytic solutions of initial and boundary value problems for ordinary differential equations and for studying their properties.
