

INSTALLATION

For under eave installation, the sensor head must be rotated as shown in the next two steps for proper operation and to avoid the risk of electrical shock.

For eave mount only:

- ❑ Swing the sensor head towards the clamp screw.

- ❑ Rotate the sensor head clockwise 180° so the controls face down.

If the sensor pops out of the ball joint, loosen the clamp screw and push the sensor back into the ball joint. Tighten the clamp screw when done.

These instructions show the sensor wired to flood-lamps. The **white sensor wire is neutral**. The **black sensor wire is hot**. The red wire is the switched "hot" wire. The **lighting load** (500 W, 4.2A max) is placed across the white and red wires.

WIRE THE LIGHT CONTROL

⚠ WARNING: Turn power off at circuit breaker or fuse.

- ❑ Remove the existing light fixture, if present.

- ❑ After screwing the sensor into the wall plate, connect the junction box wires to the light control wires by twisting together and securing with wire connectors.

Optional: Connect additional load across the white and red wires. Total lighting load including lampheads on fixture must not exceed 500W (4.2A).

MOUNT THE LIGHT

- ❑ Follow the instructions that came with your light fixture for mounting and adjusting the light fixture.
- ❑ Keep regular PAR-38 lamps at least 1" (25 mm) from the sensor. Halogen lamps should be kept at least 2" (51 mm) from the sensor.

TEST AND ADJUSTMENT

- ❑ Turn on the circuit breaker and light switch.

NOTE: Sensor has a 1 1/2 minute calibration period before it will detect motion. When first turned on, wait 1 1/2 minutes.

Energy Conservation Guidebook Dale R. Patrick,Stephen W. Fardo,Ray E. Richardson,Brian W. Fardo,Mark Barron,2023-12-14

Efficient energy management and effective conservation procedures have been very important considerations for our society for many years An oil embargo in the 1970s and early 1980s brought about a new awareness of energy conservation Because of various factors like loss of tax credits and efficiency standards imposed by the government public interest dropped considerably in regard to energy conservation A revival in energy conservation among the general public occurred following the Persian Gulf War in the early 1990s What does the 21st century hold Conflicts in the Middle East high prices for

petroleum and increasing population worldwide will all be significant influences on energy and its conservation. Considerable discussion of climate change, global warming, and increased concerns in regard to our electricity supply have provided motivation for building energy demand to be more flexible. *Energy Management and Conservation Fourth Edition* provides a very practical discussion of how energy can be managed and saved in most types of buildings. This edition not only updates the previous edition but adds updated content concerning energy cost reduction, going green to improve the environment. The authors of this book have written several books that use the systems approach. Through the use of the systems approach, the reader will be able to grasp how different parts of a building fit together to form a unit that uses energy efficiently. This text provides a thorough and practical discussion of the operation of systems that are found in most types of buildings. Each system is discussed with energy management and conservation in mind, going green to save money and improve the environment. There are many ways to manage a building to accomplish efficient energy conservation. Several of the chapters have checklists at the end to summarize ways of conserving energy that relate to the chapter. Important changes in this edition include coverage of governmental requirements from agencies such as Environmental Protection Agency (EPA), United States Department of Energy (USDOE), and American Society of Refrigerating Heating and Air Conditioning Engineering (ASHRAE) updated as of 2022 standards. Instrumentation updates include types of sensors and the concept of smart devices such as meters. Addition of computer building maintenance management systems and new updates for renewable energy resources are included. Enhancements to existing systems content such as variable frequency drives for pumps have been carefully added.

Lighting Upgrades Damon Wood, 2021-01-07. First published in 2004. Green Lights lighting specialist Damon Wood takes you step by step through upgrading a lighting system in either a retrofit or complete redesign scenario for the purpose of increasing both energy efficiency and productivity. This guide is designed for use by anyone who needs to understand the principles of lighting and light's impact on conservation, productivity, and safety. Readers will find valuable discussion of lighting quality, upgrade strategies, applications, technologies, economics, maintenance, project implementation, and methods for assessing specific opportunities. This fully illustrated guide addresses these issues in lay terms and in an easy to understand logical style.
