

Troubleshooting

- Inspect the following before diagnosing the system.
 - Loose spark plug caps or spark plug wire connections.
 - Water in the spark plug cap.
 - Loose or poor contact of ignition system connectors.

No Spark At All Plugs (Faulty Input System)

- If there is no spark to the plugs, the problem could be the input to the ignition system (ignition pulse generator, power input circuit of the ignition control module (ICM), neutral switch, or side stand switch because it controls the ignition control module (ICM)).

Check if the battery voltage is measured between power source input line at the ignition control module (ICM) connector with the ignition switch ON and the engine stop switch at RUN (page 16-8).
