On The Origin of Evolution John Gribbin,Mary Gribbin,2022-06-15 The theory of evolution by natural selection did not spring fully formed and unprecedented from the brain of Charles Darwin The idea of evolution had been around in various guises since the time of Ancient Greece And nor did theorizing about evolution stop with what Daniel Dennett called Darwin s dangerous idea In this riveting new book bestselling science writers John and Mary Gribbin explore the history of the idea of

evolution showing how Darwin's theory built on what went before and how it was developed in the twentieth century through an understanding of genetics and the biochemical basis of evolution into the so called modern synthesis and beyond Darwin deserves his recognition as the primary proponent of the idea of natural selection but as the authors show his contribution was one link in a chain that extends back into antiquity and is still being forged today The Big Questions: Evolution Francisco Ayala, 2012-06-07 In The Big Questions Evolution one of the world's leading experts Francisco Ayala examines key facets of genetics evolution and cloning He uses the most up to date research to answer the 20 key questions of evolution and investigate what they tell us about life on Earth What is evolution What is natural selection Is evolution a random process What are chromosomes genes and DNA What is molecular evolution What is the tree of life What does the fossil record tell us Is intelligence inherited Can I clone myself Is language a uniquely human attribute Was Darwin right What is survival of the fittest What is a species How do genes build bodies How did life begin Am I really a monkey What is the missing link Will humans continue to evolve Where does morality come from Is Creationism true **Questions and Answers on**
