

## INTRODUCTION

---

The purpose of a technical report is to completely and clearly describe technical work, why it was done, results obtained and implications of those results. The technical report serves as a means of communicating the work to others and possibly providing useful information about that work at some later date. A well-written report allows the reader to quickly understand what has been accomplished. The report also provides sufficient detail to allow the reader to recreate the results although the level of detail provided depends heavily on the report's audience and any proprietary nature of the work.

Clear presentation of results is at least as important as the results themselves; therefore, writing a report is an exercise in effective communication of technical information. Results, such as numerical values, designed systems or graphs by themselves are not very useful. To be meaningful to others, results must be supported by a written explanation describing how results were obtained and what significance they hold, or how a designed system actually functions. Although the person reading the report may have a technical background, the author should assume unfamiliarity with related theory and procedures. The author must therefore supply details that may appear obvious or unnecessary. With practice, the technical report writer learns which details to include.

The key to a well-written report is organization. A report that is divided into several sections, occurring in a logical sequence, makes it easy for the reader to quickly obtain an overview of the contents as well as locate specific information. This document provides guidelines for producing a well-written technical report.

## THE FORMAL TECHNICAL REPORT

---

The formal technical report contains a complete, concise, and well-organized description of the work performed and the results obtained. Any given report may contain all of the sections described herein or a subset, depending upon the report requirements. These requirements are decided by the author and are based on the audience and expected use of the report.

All reports have certain aspects in common regardless of expected usage. Common report sections are presented first, and all possible sections potentially included in a report are discussed afterwards.

## UNIVERSAL ASPECTS OF ALL REPORTS

---

- The report should be written in an active voice using the third person in most instances. Avoid using personal pronouns. Personal pronouns tend to personalize the technical information that is generally objective rather than subjective in nature. Use correct grammar, punctuation, and spelling. *Attention to these details results in a professional tone to the report.*
