The Routledge Handbook of Waste, Resources and the Circular Economy Terry Tudor, Cleber JC.

Dutra, 2020-12-27 The Handbook introduces, contextualises, critiques and discusses a range of perspectives associated with the concept of the circular economy. These perspectives span an array of subjects including economics, environmental policymaking, sociology, environmental science, environmental and industrial engineering, management, international development and human geography. A fundamental underpinning of the Handbook is that it takes account of a wide range of sectors as well as geographical perspectives that incorporate both a Global North and Global South world context. This approach is crucial because it is only within such a holistic perspective that the circular economy concept can truly be examined. In addition, these issues are examined both from a theoretical as well as a practical perspective using real world case studies for illustration. Given its wide subject sectoral and geographical areas of focus, the Handbook should be of value not only for those undertaking research in the field of circular economy but also stakeholders involved in policymaking as well as decision making on the front line.

The State of African Cities, 2014 United Nations Publications, 2015-09-10 The African continent is currently in the midst of simultaneously unfolding and highly significant demographic, economic, technological, environmental, urban and socio-political transitions. Africa's economic performance is promising with booming cities supporting growing middle classes and creating sizable consumer markets. Despite significant overall growth, the continent continues to suffer under very rapid urban growth accompanied by massive urban poverty and many other social problems. These seem to indicate that the development trajectories followed by African nations since post-independence may not be able to deliver on the aspirations of broad-based human development and prosperity for all. This report therefore argues for a bold re-imagining of prevailing models in order to steer the ongoing transitions towards greater sustainability based on a thorough review of all available options. That is especially the case since the already daunting urban challenges in Africa are now being exacerbated by the new vulnerabilities and threats associated with climate and environmental change.
