Changing the Subject J. Myron Atkin,Paul Black,2005-11-01 Change in education is too often a process which enthusiasts ranging from top policy makers to groups of teachers plan and drive forward but in which they all find unexpected pitfalls Every innovation depends on the commitment of schools and teachers to make it work But often that commitment is lacking or is less than total or it turns to frustration as events develop This book is based on a set of stories from teachers and

education professionals in thirteen OECD countries Twenty three case studies of educational innovation in science mathematics and technology have involved school teachers inspectors academics both subject specialists and educational researchers policy makers and advisors The case studies come from Australia Canada France Germany Ireland Japan the Netherlands Norway Scotland Spain Switzerland and the USA Drawing on this rich variety of material the authors concentrate on the origins and purposes of innovation within and across the science mathematics and technology curricula They consider the conceptions of the three subjects along with issues of teaching learning and assessment and explore the involvement of both teachers and students They reflect on the various strategies adopted to cope with or bring about change and offer valuable insights to advisors developers policy makers and practitioners both in schools and outside The writing team includes Paul Black King s College London Mike Atkin Stanford University Raymond Duval University of Lille Edwyn James Consultant OECD John Olson Queen s University of Kingston Ontario Dieter Pevsner Consultant London Senta Raizen National Centre for Improving Science Education Washington Maria Saez University of Valladolid Spain and Helen Simons Southampton University Published in association with the OECD     Meeting the Needs of Gifted and Talented Students Gwen Goodhew,2009-04-26 A thoroughly researched one stop resource for all those with responsibility for classes that contain gifted and talented students at both primary and secondary level     **The Neurodiversity Handbook for Trainee Teachers** Sarah Alix,2023-07-26 Considering a neurodivergent world is vital in society today and even more so in the classroom This book will support your knowledge and development as a trainee teacher so you can better understand the complexities of working with neurodivergent pupils Starting with a model of difference rather than deficit this book will guide trainee teachers to understand neurodiversity within the classroom providing strategies which aim to support their students Dr Sarah Alix is Initial Teacher Training Programme Director with the Sigma Trust     Make the Grade at GCSE Mathematics Higher Tier Anthony Nicolaides,2008     *The administration of examinations for 15-19 year olds in England* Great Britain: Parliament: House of Commons: Education Committee,2012-07-03 Additional written evidence is contained in Volume 3 available on the Committee website at [www.parliament.uk/educom](http://www.parliament.uk/educom)     Research for Educational Change Jill Adler,Anna Sfard,2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms

Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research
