The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week. The HR and EE were measured at baseline and after 12 weeks. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.
