Wuketits, 2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life sciences It contains six papers which deal with reductionism in different fields of biological research Also the holistic perspective and the systems view is discussed in some of the papers The message of this discussion is that whereas reductionism is indeed an important strategy the systems approach is needed It is argued by some of the authors that organisms are complex systems and not just heaps of molecules so that the analytical method does not suffice Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems what can be seen particularly in the field of evolutionary biology It is true that any organismic activity is molecular this is to say that it is based on molecular mechanisms But it is also true that the whole organism displays certain patterns of behavior which are not just molecular Any organism can be described as a system of different levels of organization different levels of order and complexity and it is important therefore to study all of the organizational levels and to see their peculiarities It should be obvious however that there is not one problem of reductionism but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections **Bulletin**, 1944 **MTS Memo** Marine Technology Society, 1968 Monthly Catalog of United States Government Publications, 1993 **Weekly Compilation of Presidential Documents**, 1997 **Scientific and Technical Aerospace Reports**, 1989 **Bulletin of the Atomic Scientists**, 1992-07 Research in Education, 1974 Bibliography of North American Geology, 1929-1939 Emma Mertins Thom, 1944 *Memo to America, the DP Story* United States.
