Anticipation and the control of voluntary action Dorit Wenke, Rico Fischer, A major hallmark in the adaptive control of voluntary action is the ability to anticipate short and long term future events Anticipation in its various forms is an important prerequisite for higher order cognitive abilities such as planning reasoning and the pursuit of both immediate goals and long term goals that may even stand in opposition to immediate desires and needs e g to invest in pension funds Therefore it is not surprising that diverse and rather independent research lines have evolved all somehow targeting various anticipatory capacities that are involved in the control of voluntary action and thus contribute to the uniqueness of human goal directed behavior For example prediction of the incentive value of action outcomes drives goal directed instrumental behavior e g Dickinson Rushworth Prinz 1990 Furthermore the degree of match between intended anticipated and actual action effects has been proposed to be a major determinant of motor programming and online action corrections Jeannerod 1981 motor learning e g Wolpert Diedrichsen e g Abell Happ Los Nobre Coull 2010 and to anticipate conflict e g Correa Rao Nobre 2009 Voluntary action is influenced by the anticipation and prediction of mental effort in task processing e g Song Schwarz 2008 In addition the anticipation of long term future social consequences e g expected aloneness has been shown to affect cognitive mechanisms involved in logic and reasoning e g Baumeister Twenge Nuss 2002 Last but not least learning of statistical contingencies e g conflict frequency leads to the anticipation and prediction of context specific executive control requirements e g Crump Gong Milliken 2006 Dreisbach Haider 2006 The aim of the present Research Topic is to provide a platform that offers the possibility of cross fertilization and enhanced visibility among to date rather segregated research lines

Modern Origins Jean-Jacques Hublin, Shannon McPherron, 2012-03-31 Over the last decade Africa has taken a central position in the search for the timing and mechanisms leading to modern human origins and the rich archaeological and human paleontological record of North Africa is critical to this search In this volume we bring together new research into the archaeology human paleontology chronology and environmental context of modern human origins in North Africa The result is a volume that better integrates the North African record into the modern human origins debate and at the same time highlights the research questions that are currently the focus of continued work in the area

Amazonian Floodplain Forests Wolfgang J. Junk,Maria T. F. Piedade,Florian Wittmann,Jochen Schöngart,Pia Parolin,2010-09-27 Central Amazonian floodplain forests are an unique and endangered ecosystem The forests grow in areas that are annually flooded by large rivers during mean periods of up to 8 months and at depths of up to 10 m Despite this severe stress these forests consist of over 1 000 species and are by far the most species rich floodplain forests worldwide The trees show a broad range of morphological anatomical physiological and phenological adaptations that enable them not only to survive the adverse environmental conditions but also to produce large amounts of biomass when the nutrient levels in water and soils are sufficiently high This is the case in the floodplains of white water rivers which are used for fisheries agriculture and cattle ranching but which also have a high potential for the production of timber and non timber products when adequately managed Latest research on ecophysiology gives insight how tree species adapt to the oscillating flood pulse focusing on their photosynthesis respiration sap flow biochemistry phenology wood and leave anatomy root morphology

and functioning fruit chemistry seed germination seedling establishment nitrogen fixation and genetic variability Based on tree ages lifetime growth rates and net primary production new concepts are developed to improve the sustainability of traditional forest managements in the background of an integrated natural resource management This is the first integrative book on the functioning and ecologically oriented use of floodplain forests in the tropics and sub tropics It provides fundamental knowledge for scientist students foresters and other professionals on their distribution evolution and phytogeography This book is an excellent testimony to the interdisciplinary collaboration of a group of very dedicated scientists to unravel the functioning of the Amazonian Floodplain forests They have brought together a highly valuable contribution on the distribution ecology primary production ecophysiology typology biodiversity and human use of these forests offering recommendations for sustainable management and future projects in science and development of these unique wetland ecosystems It lays a solid scientific foundation for wetland ecologists foresters environmentalists wetland managers and all those interested in sustainable management in the tropics and subtropics Brij Gopal Executive Vice President International Society for Limnology SIL

sociology **Coccidiosis in Livestock, Poultry, Companion Animals, and Humans** J. P. Dubey, 2019-11-27 Coccidiosis is one of the most important diseases of livestock particularly poultry with billions of dollars spent on prevention worldwide The disease is so important and pervasive that until recently all poultry feed was medicated with coccidiostats mainly antibiotics With the rapid development of drug resistance the search is on for alternative methods of control of coccidiosis in poultry With chapters authored by internationally renowned scientists this book covers coccidiosis in all major livestock species including cattle sheep and goats Special emphasis is given to poultry coccidiosis given the significant economic impact and another chapter looks at intestinal coccidiosis in humans including Cyclospora Chapters discuss techniques molecular biology host pathogen immunobiology and immunoprophylaxis genetics and genomics biology and chemotherapy Despite an explosion of research in the last 40 years there has been no new book published discussing conventional coccidiosis for more than 25 years This comprehensive review therefore answers an urgent need for a book dealing exclusively with conventional coccidia Cystoisospora Cyclospora It provides concise authoritative up to date information on coccidiosis with particular attention given to research in the last 28 years This book is essential reading for any practitioner or researcher involved in livestock production including biologists veterinarians parasitologists and researchers from government academia and industry **Fish atlas of the Celtic Sea, North Sea, and Baltic Sea** Henk J.L. Heessen, Niels Daan, Jim R.

Ellis, 2023-09-14 The atlas presents a unique set of abundance data to describe the spatial depth size and temporal distribution of demersal and pelagic fish species over an extensive marine area together with accounts of their biology A large number of pictures graphs and distribution maps illustrate the text By largely avoiding or at least explaining scientific terms and providing extensive references the book should be useful for both laymen and scientists The quantitative information on some 200 fish taxa is derived from 72 000 stations fished by research vessels during the period 1977 2013 The area covers the northwest European shelf from west of Ireland to the central Baltic Sea and from Brittany to the Shetlands Although the surveys extend beyond the shelf edge only taxa reported at least once in waters less than 200 m are included Typical deep water species and typical fresh water species are excluded We hope this publication will contribute to gaining a better understanding of the ocean ecosystems **The Genesis of Roman Architecture** John North

Hopkins, 2016-02-09 This groundbreaking study traces the development of Roman architecture and its sculpture from the earliest days to the middle of the 5th century BCE Existing narratives cast the Greeks as the progenitors of classical art and architecture or rely on historical sources dating centuries after the fact to establish the Roman context Author John North Hopkins however allows the material and visual record to play the primary role in telling the story of Rome's origins synthesizing important new evidence from recent excavations Hopkins's detailed account of urban growth and artistic political and social exchange establishes strong parallels with communities across the Mediterranean From the late 7th century Romans looked to increasingly distant lands for shifts in artistic production By the end of the archaic period they

were building temples that would outstrip the monumentality of even those on the Greek mainland. The book's extensive illustrations feature new reconstructions allowing readers a rare visual exploration of this fragmentary evidence.
