*Molecular Chaperones and Neurodegeneration* Cintia Roodveldt,Tiago F. Outeiro,Janice E. Braun,2017-12-06 Molecular chaperones or heat shock proteins HSPs play essential roles in safeguarding structural stability and preventing misfolding and aggregation of proteins and maintaining the proteome functionality in the cell For over two decades until the present time new functions have been discovered and several molecular mechanisms have been elucidated for many chaperones while the field is being continuously challenged by new open questions Probably as a consequence of the increasing research on the molecular bases of neurodegenerative diseases and the realisation that many such disorders are linked to protein misfolding processes unleashing the roles and mechanisms of chaperones in the context of neurodegeneration has become a prime scientific goal This e book contains a diversity of reviews perspective and original research articles highlighting the importance and potential of this emerging subject

**Ways to improve tumor uptake and penetration of drugs into solid tumors** Fabrizio Marcucci, Angelo Corti, Ronald Berenson,2014-12-05 The main scope of this topic is to give an update on pharmacologic and non pharmacologic approaches to enhance uptake and penetration of cancer drugs into tumors Inadequate accumulation of drugs in tumors has emerged over the last decade as one of the main problems underlying therapeutic failure and drug resistance in the treatment of cancer Insufficient drug uptake and penetration is causally related to the abnormal tumor architecture Thus poor vascularization increased resistance to blood flow and impaired blood supply represent a first obstacle to the delivery of antitumor drugs to tumor tissue Decreased or even inverted transvascular pressure gradients compromise convective delivery of drugs Eventually an abnormal extracellular matrix offers increased frictional resistance to tumor drug penetration Abnormal tumor architecture also changes the biology of tumor cells which contributes to drug resistance through several different mechanisms The variability in vessel location and structure can make many areas of the tumor hypoxic which causes the tumor cells to become quiescent and thereby resistant to many antitumor drugs In addition the abnormally long distance of part of the tumor cell population from blood vessels provides a challenge to delivering cancer drugs to these cells We have recently proposed additional mechanisms of tumor drug resistance which are also related to abnormal tumor architecture First increased interstitial fluid pressure can by itself induce drug resistance through the induction of resistance promoting paracrine factors Second the interaction of drug molecules with vessel proximal tumor cell layers may also induce the release of these factors which can spread throughout the cancer and induce drug resistance in tumor cells distant from blood vessels

As can be seen abnormal tumor architecture inadequate drug accumulation and tumor drug resistance are tightly linked phenomena suggesting the need to normalize the tumor architecture including blood vessels and or increase the accumulation of cancer drugs in tumors in order to increase therapeutic effects Indeed several classes of drugs that we refer to as promoter drugs have been described that promote tumor uptake and penetration of antitumor drugs including those that are vasoactive modify the barrier function of tumor vessels debulk tumor cells and overcome intercellular and stromal barriers In addition also non pharmacologic approaches have been described that enhance tumor accumulation of effector drugs e g convection enhanced delivery hyperthermia etc Some drugs that have already received regulatory approval e g the anti VEGF antibody bevacizumab exert antitumor effects at least in part through normalization of the tumor vasculature and enhancement of the accumulation of effector drugs Other drugs acting through different mechanisms of action are now in clinical development e g NGR TNF in phase II III studies and others are about to enter clinical investigation e g JO 1
