dominated the art of painting until the late Middle Ages. Given the immature technological means, objects on the Earth's surface were often represented in academic and technical disciplines by two-dimensional cross sections oriented along combinations of three mutually perpendicular directions. As soon as computer science evolved, scientists have steadily been improving the three-dimensional representation of the Earth and developed techniques to analyze the many natural processes and phenomena taking part on its surface. Both computer-aided design (CAD) and geographical information systems (GIS) have been developed in parallel during the last three decades. While the former concentrates more on the detailed design of geometric models of object shapes, the latter emphasizes the topological relationships between geographical objects and analysis of spatial patterns. Nonetheless, this distinction has become increasingly blurred, and both approaches have been integrated into commercial software packages. In recent years, an active line of inquiry has emerged along the junctures of CAD and GIS, viz. 3D geoinformation science. Studies along this line have recently made significant inroads in terms of 3D modeling and data acquisition.

**Flood Handbook** Saeid Eslamian, Faezeh A. Eslamian, 2022-04-18. Floods are difficult to prevent but can be managed in order to reduce their environmental, social, cultural, and economic impacts. Flooding poses a serious threat to life and property, and therefore it is very important that flood risks be taken into account during any planning process. This handbook presents different aspects of flooding in the context of a changing climate and across various geographical locations. Written by experts from around the world, it examines flooding in various climates and landscapes, taking into account environmental, ecological, hydrological, and geomorphic factors, and considers urban, agriculture, rangeland, forest, coastal, and desert areas. Features: Presents the main principles and applications of the science of floods, including engineering and technology, natural science, as well as sociological implications. Examines flooding in various climates and diverse landscapes, taking into account environmental, ecological, hydrological, and geomorphic factors. Considers floods in urban, agriculture, rangeland, forest, coastal, and desert areas. Covers flood control structures, as well as preparedness and response methods. Written in a global context by contributors from around the world.

Overexploitation and Contamination of Shared Groundwater Resources Christophe J.G. Darnault, 2008-02-02. Forty percent of the world's population depends upon increasingly scarce and shared water resources. This situation is critical at both international and national levels, not only for socio-economic development but also for the regional stability. The intensive use of groundwater for irrigation and water supply is adding pressures to scarce water resources and the environment through overexploitation and contamination, which result in situations that may lead to conflicts. The book from the NATO ASI on Overexploitation and Contamination of Shared Groundwater Resources: Management, Bio-technological and Political Approaches to Avoid Conflicts is written by authors from different disciplines and regions of the world. The aim of the book is to contribute to the knowledge of shared groundwater resources management to avoid conflicts by considering multi-disciplinary approaches based on effective and equitable water sharing for all water users through cooperation and within a compassionate ecological framework, along with

the need for sustainable resources development and the quest for environmental and human security The scope of the book covers the hydrogeological environmental bio technological and management aspects of shared groundwater resources integrating social economic and political dimensions as well as legal and educational perspectives Evaluation of Best Management Practices for Highway Runoff Control National Cooperative Highway Research Program,2006 At head of title National Cooperative Highway Research Program **Methods of Environmental and Social Impact Assessment** Peter Morris,Riki Therivel,Graham Wood,2017-09-13 Environmental and social impact assessment ESIA is an important and often obligatory part of proposing or launching any development project Delivering a successful ESIA needs not only an understanding of the theory but also a detailed knowledge of the methods for carrying out the processes required Riki Therivel and Graham Wood bring together the latest advice on best practice from experienced practitioners to ensure an ESIA is carried out effectively and efficiently This new edition explains how an ESIA works and how it should be carried out demonstrates the links between socio economic cultural environmental and ecological systems and assessments incorporates the World Bank s IFC performance standards and best practice examples from developing as well as developed countries includes new chapters on emerging ESIA topics such as climate change ecosystem services cultural impacts resource efficiency land acquisition and involuntary resettlement Invaluable to undergraduate and MSc students of ESIA on planning ecology geography and environment courses this internationally oriented fourth edition of Methods of Environmental and Social Impact Assessment is also of great use to planners ESIA practitioners and professionals seeking to update their skills
