intelligence and psychological aspects. They touch on a number of industry sectors but are restricted to none for the essence of the event is the transfer of lessons and technologies between sectors. All address practical issues and offer useful information and advice. Contributions from industrial authors provide evidence of both safety consciousness and safety professionalism in industry. Smith's on safety analysis in air traffic control and Rivett's on assessment in the automotive industry are informative on current practice. Frith's thoughtful paper on artificial intelligence in safety critical systems reflects an understanding of questions which need to be resolved. Tomlinson's, Alvery's and Canning's papers report on collaborative projects: the first on results which emphasise the importance of human factors in system development; the second on the development and trial of a comprehensive tool set; and the third on experience in achieving technology transfer something which is crucial to increasing safety.
