Handbook of Bibliometric Indicators Roberto Todeschini, Alberto Baccini, 2016-05-04 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers

Multidimensional Journal Evaluation Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011

Beyond Power Transitions David C. Kang,Xinru Ma,2024-10-08 Questions about the likelihood of conflict between the United States and China have dominated international policy discussion for years But the leading theory of power transitions between a declining hegemon and a rising rival is based exclusively on European examples such as the Peloponnesian War as chronicled by Thucydides as well as the rise of Germany under Bismarck and the Anglo German rivalry of the nineteenth and early twentieth centuries What lessons does East Asian history offer for both the power transitions debate and the future of U S China relations Examining the rise and fall of East Asian powers over 1 500 years Beyond Power Transitions offers a new perspective on the forces that shape war and peace Xinru Ma and David C Kang argue that focusing on the East Asian experience underscores domestic risks and constraints on great powers not relative rise and decline in international competition They find that almost every regime transition before the twentieth century was instigated by internal challenges and even the exceptions deviated markedly from the predictions of power transition theory Instead East Asia was stable for a remarkably long time despite massive power differences because of common understandings about countries relative status Provocative and incisive this book challenges prevailing assumptions about the universality of power transition theory and shows why East Asian history has profound implications for international affairs today

The Overproduction of Truth Gianfranco Pacchioni,2018-08-09 The way science is done has changed radically in recent years Scientific research and institutions which have long been characterized by passion dedication and reliability have increasingly less capacity for more ethical pursuits and are pressed by hard market laws From the vocation of a few science has become the profession of many possibly too many These trends come with consequences and risks such as the rise in fraud plagiarism and in particular the sheer volume of scientific publications often of little relevance The solution A slow approach with more emphasis on quality rather than quantity that will help us to rediscover the essential role of the responsible scientist This work is a critical review and assessment of present day policies and behavior in scientific production and publication It touches on the tumultuous growth of scientific journals in parallel with the growth of self declared scientists over the world The author s own reflections and experiences help us to understand the mechanisms of contemporary science Along with personal reminiscences of times past the author investigates the loopholes and hoaxes of pretend journals and nonexistent congresses so common today in the scientific arena The book also discusses the problems of bibliometric indices which have resulted in large part from the above distortions of scientific life
