Reptile Ecology and Conservation C. Kenneth Dodd Jr., 2016-05-05 This practical handbook of reptile field ecology and conservation brings together a distinguished international group of reptile researchers to provide a state-of-the-art review of the many new and exciting techniques used to study reptiles. The authors describe ecological sampling techniques and how they are implemented to monitor the conservation status and population trends of snakes, lizards, tuatara, turtles, and crocodilians throughout the world. Emphasis is placed on the extent of statistical inference and the biases associated with different techniques and analyses. The chapters focus on the application of field research and data analysis for achieving an understanding of reptile life history, population dynamics, movement patterns, thermal ecology, conservation status, and the relationship between reptiles and their environment. The book emphasises the need for thorough planning and demonstrates how a multi-dimensional approach incorporates information related to morphology, genetics, molecular biology, epidemiology, statistical modelling, animal welfare, and biosecurity. Although accentuating field sampling, sections on experimental applications in laboratories and zoos, thermal ecology, genetics, landscape ecology, disease, and biosecurity, and management options are included. Much of this information is scattered in the scientific literature or not readily available, and the intention is to provide an affordable comprehensive synthesis for use by graduate students, researchers, and practising conservationists worldwide.

Assessing Multilingual Children Sharon Armon-Lotem, Jan de Jong, Natalia Meir, 2015-04-28 Second language learners often produce language forms resembling those of children with Specific Language Impairment (SLI). At present, professionals working in language assessment and education have only limited diagnostic instruments to distinguish language-impaired migrant children from those who will eventually catch up with their monolingual peers. This book presents a comprehensive set of tools for assessing the linguistic abilities of bilingual children. It aims to disentangle effects of bilingualism from those of SLI, making use of both models of bilingualism and models of language impairment. The book's methods-oriented focus will make it an essential handbook for practitioners who look for measures which could be adapted to

a variety of languages in diverse communities as well as academic researchers
