

Dissecting lungs

The purpose of this activity is:

- to find out about the structure of the lungs
- to find out how our lungs move as we breathe
- to relate the structure of the lungs to how they work when we breathe

Procedure

SAFETY:

- Wear eye protection whenever there is a risk to the eyes, for example, when changing scalpel blades, cutting cartilage or if the dissection material has been preserved.
- Take care with sharp dissecting tools and report any cuts to your teacher.
- Do not breathe directly into the lungs.
- At the end of the practical, disinfect the work area and wash your hands thoroughly using soap and hot water.

Investigation

- Describe the look, feel and color of the lungs.
- Identify the trachea and explore the texture of its wall.
- Explore the tubes that enter the lungs and see how they divide.
- If the heart is still attached, identify the main blood vessels leaving and entering the lungs. If not, try to identify large blood vessels anyway.
- Identify any membrane surrounding the lungs.
- Inflate the lungs (following your teacher's instructions) and observe how they behave.
- Cut a piece of lung tissue and observe the cut surface and how the tissue behaves when you drop it into water.

QUESTIONS

- 1 What structure makes the windpipe stay open, but able to bend?
- 2 Are the lungs hollow bags or spongy? What does the lung tissue look like where you cut into it? What happens when you put this tissue into water?
- 3 What are the lungs like when full of air? Do you have to squeeze them to push the air out again?
