Handbook of Educational Psychology and Students with Special Needs Andrew J. Martin, Rayne A. Sperling, Kristie J. Newton, 2020-02-18. Handbook of Educational Psychology and Students with Special Needs provides educational and psychological researchers, practitioners, policy makers, and graduate students with critical expertise on the factors and processes relevant to learning for students with special needs. This includes students with attention deficit hyperactivity disorder, other executive function difficulties, behavior, and emotional disorders, autism spectrum disorder, intellectual disabilities, learning disabilities, dyslexia, language and communication difficulties, physical and sensory disabilities, and more. With the bulk of educational psychology focused on mainstream or typically developing learners, relatively little educational psychology theory, research, measurement, or practice has attended to students with special needs. As clearly demonstrated in this book, the factors and processes studied within educational psychology—motivation and engagement, cognition, and neuroscience, social-emotional development, instruction, home and school environments, and more—are vital to all learners, especially those at risk or disabled. Integrating guidance from the DSM 5 by the American Psychiatric Association and the International Classification of Diseases ICD 10 by the World Health Organization, this book synthesizes and builds on existing interdisciplinary research to establish a comprehensive case for effective psycho-educational theory, research, and practice that address learners with special needs. Twenty-seven chapters by experts in the field are structured into three parts on diverse special needs categories, perspectives from major educational psychology theories, and constructs relevant to special needs learning, development, and knowledge building.

SELF - Driving Positive Psychology and Wellbeing Frédéric Guay, Herbert Marsh, Dennis M. McInerney, Rhonda G. Craven, 2017-08-01. Research on the Self relates to various phenomena including self-esteem, self-concept, self-verification, self-awareness, identity, self-efficacy, passion, self-determination, goals, etc., that are predictive of optimal functioning and well-being. Such a research endeavor is consistent with the positive psychology movement focusing on the scientific study of what makes people psychologically healthy, happy, and satisfied in their lives, as well as on their strengths and virtues. The positive psychology movement cultivates a sensible approach to optimal human functioning and well-being in various life contexts. Chapters in this volume will illustrate some of the best of the research on the interplay between the self and positive psychology to show the potential of this research for transforming our societies.

SELF - Driving Positive Psychology and Wellbeing thus provides a unique insight into self and its fundamental role for well-being. This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence of various phenomena important for well-being. The scope of the volume is thus very broad and provides a framework for the development of the chapter as authors see most appropriate.
