Conservation Drones Serge A. Wich, Lian Pin Koh, 2018-05-31 Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up to date data on the distribution and density of species as well as the threats to their habitats in their ongoing attempts to conserve and monitor biodiversity Conservation drones are low cost autonomous and operator friendly unmanned aerial vehicles that can be used for surveying mapping and monitoring both habitat and biodiversity They are fast becoming a valuable complement to ground based surveys and satellite imagery for a wide range of ecological and conservation applications The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation

Facchin, Elisa Cavicchiolo, Edgar Chan, 2025-02-10 Neuropsychological testing represents an essential part of the clinical examination of neuropsychological patients and these measures remain the primary instrument for clinical research in neuropsychology. For these reasons, old procedures were psychometrically investigated to assess their metrical properties. As a result of the redesigned procedures, old tests were improved in terms of their psychometric properties and characteristics. The field of neuropsychological testing needs to be updated with new research in order to improve the clinical practice of neuropsychological testing: the psychometric characteristics of new neuropsychological tests and the theories behind the testing in a circular way. In this research topic, we want to report recent advances and changes from old standard diagnostic testing to more recent procedures and methods in the area of cognitive testing. Applications, comparisons, novel definitions and measures, updated procedures and psychometric properties of existing instruments, measurement invariance, reliability, repeatability, specific norms, particular applications and use in specific patients are all welcome. Open access tests, methods and procedures are encouraged together with studies that follow the Open Science initiative. This topic joins two different backgrounds in this area of research: psychometrics and neuropsychology, and all studies in these areas will be considered, including reviews and meta-analyses.
