Microeconomics Steve Erfle, 2017-09-14 The overarching premise of this text is that microeconomics is most effectively learned in an active learning interactive environment Students have access to more than 200 Interactive Excel Figures in the online text that allow them to move the graphs using sliders and click boxes This interactivity helps students understand how graphic elements relate to one another These files do not require knowledge of Excel More figures than are typical and many of the figures involve multiple scenarios of the same basic graph Often the text employs interactive questions that require interpreting these scenarios questions posed are answered at the bottom of the page Despite the geometric orientation this text is not light on algebraic analysis The geometry is backed up by the relevant algebra More than 500 equations are numbered for easy reference both within and across chapters And just like the geometry the algebra is essentially error free because it was used to create the graphs The geometric orientation is perfect for the non calculus enhanced classroom but the text can be readily used in a calculus based class because a calculus treatment of the material is provided in appendices and endnotes and calculus based problems are included in the Intermediate Microeconomics An Interactive Approach Workbook **Research in the History of Economic Thought and Methodology** Marianne Johnson, 2012-08-03 Includes archival documents and essays exploring the inter relationship between the government and the economy This title examines the one sided controversy generated by Rose Wilder Lane and V Orval Watts against a new generation of Keynes influenced textbooks which focused on governmental policy and the scope of government activity *Experimental Methods* Daniel Friedman, Shyam Sunder, 1994-01-28 Experimental economics is a rapidly growing field of inquiry and there currently exist several textbooks and surveys describing the results of laboratory experiments in economics This primer however is the first hands on guide to the physical aspects of actually conducting experiments in economics It tells researchers teachers and students in economics how to deal with human subjects how to design meaningful laboratory environments how to design experiments how to conduct experiments and how to analyse and report the data It also deals with methodological issues It can be used to structure an undergraduate or graduate course in experimental economics Resources in Education , 1998
