Peripheral Neurology Jay Allan Liveson,2000-09-21 Peripheral Neurology was the first book to innovatively utilize case presentations as a vehicle to teach peripheral neurology In fact it was the first to categorize the field of peripheral neurology as most other neurology texts concentrated on diseases of the central nervous system This case approach has since been emulated in many other texts and on various web sites Emphasizing the clinical condition rather than electrodiagnostic technique each topic is thoroughly addressed first in the Fundamental Concepts of Part I and then in multiple Case Studies presented in Part II The reader is able to simulate a true clinical environment where a diagnosis has to be arrived at with no organizational clues from the text Formulating conclusions by analyzing the history physical and laboratory data and linking from case to related case this is the only text which allows this type of interactive reading The book addresses many rare entities that the author is able to present based on his 30 years of experience
