

Density Laboratory

Answer Key

Vocabulary: buoyancy, density, graduated cylinder, mass, matter, scale, volume

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. Of the objects below, circle the ones you think would float in water. *Predictions will vary.*

Correct answers are shown:

Rock

Crane ship

Quarter

Saturn

Beach ball

2. Why do some objects float, while others sink?

Answers will vary. [An object floats when the weight of the liquid it displaces is equal to the weight of the object. Objects sink when they are heavier than the equivalent volume of liquid. In other words, objects sink when they are denser than the liquid.]

Gizmo Warm-up

The *Density Laboratory Gizmo™* allows you to measure a variety of objects, then drop them in water (or other liquid) to see if they sink or float.

1. An object's **mass** is the amount of **matter** it contains. The mass of an object can be measured with a calibrated **scale** like the one shown in the Gizmo. Drag the first object onto the **Scale**. (This is object 1.)

What is the mass of object 1? *19.5 grams (19.5 g)*

2. An object's **volume** is the amount of space it takes up. The volume of an irregular object can be measured by how much water it displaces in a **graduated cylinder**. Place object 1 into the **Graduated cylinder**.

What is the volume of object 1? *14.0 cm³ (equivalent to 14.0 mL)*

Note: While milliliters (mL) are used to measure liquid volumes, the equivalent unit cubic centimeters (cm³) are used for solids. Therefore, write the volume of object 1 in cm³.

3. Drag object 1 into the **Beaker of liquid**. Does it sink or float? *It sinks.*

Energy Research Abstracts, 1992

The Powers That Be Scott L. Montgomery, 2010-07-15 Thirty years ago our global energy landscape did not look remarkably different from what it does today Three or four decades from now it certainly will dwindling oil reserves will clash with skyrocketing demand as developing nations around the world lead their citizens into the modern energy economy and all the while the grave threat of catastrophic climate change looms ever larger Energy worries are at an all time high just how will we power our future With *The Powers That Be* Scott L. Montgomery cuts through the hype alarmism and confusion to give us a straightforward informed account of where we are now and a map of where we re going Starting with the inescapable fact of our current dependence on fossil fuels which supply 80% of all our energy needs today Montgomery clearly and carefully lays out the many alternative energy options available ranging from the familiar like water and solar to such nascent but

promising sources as hydrogen and geothermal power What is crucial Montgomery explains is understanding that our future will depend not on some single wondrous breakthrough instead we should focus on developing a more diverse adaptable energy future one that draws on a variety of sources and is thus less vulnerable to disruption or failure An admirably evenhanded and always realistic guide Montgomery enables readers to understand the implications of energy funding research and politics at a global scale At the same time he doesn't neglect the ultimate connection between those decisions and the average citizen flipping a light switch or sliding behind the wheel of a car making The Powers That Be indispensable for our ever more energy conscious age
