

Ch 4 Aim 9: Experimental Design: Multiple-Choice Questions

The following questions are from *Barron's How to Prepare for the AP Statistics – 3rd Edition*. This review book is extremely helpful and its purchase is strongly recommended.

There is a penalty on the AP Statistics Exam for incorrect answers to multiple-choice questions. DO NOT GUESS RANDOMLY!! However, you should guess if you have enough knowledge about the answer to eliminate one or more choices!

Answers to the multiple-choice questions are on page 7 of this lesson.

Questions on Methods of Data Collection

1. When travelers change airlines during connecting flights, each airline receives a portion of the fare. Several years ago, the major airlines used a sample trial period to determine what percentage of certain fares each should collect. Using these statistical results to determine fare splits, the airlines now claim huge savings over previous clerical costs. Which of the following is true?
 - I. The airlines ran an experiment using a trial period for the control group.
 - II. The airlines ran an observational study using the calculations from a trial period as a sample.
 - III. The airlines feel that any monetary error in fare splitting resulting from using a statistical sample is smaller than the previous clerical costs necessary to calculate exact fare splits.

(A) I only
(B) II only
(C) III only
(D) I and III
(E) II and III
2. Which of the following are true statements?
 - I. In an experiment some treatment is intentionally forced on one group to note the response.
 - II. In an observational study information is gathered on an already existing situation.
 - III. Sample surveys are observational studies, not experiments.

(A) I and II
(B) I and III
(C) II and III
(D) I, II, and III
(E) None of the above gives the complete set of true responses.
3. Which of the following are true statements?
 - I. In an experiment researchers decide how people are placed in different groups.
 - II. In an observational study, the people themselves select which group they are in.
 - III. A control group is most often a self-selected grouping in an experiment.

"Proof," Policy, and Practice Paul E. Lingenfelter, 2023-07-03 How can we fix our schools Improve graduation rates in college What works These are questions that make the headlines and vex policy makers practitioners and educational researchers While they strive to improve society there are frequently gulfs of mutual incomprehension among them Academics longing for more influence may wrongly fault irrationality ideology or ignorance for the failure of research to inform policy and practice more powerfully Policy makers and practitioners may doubt that academics can deliver ideas that will reliably yield desirable results This book bridges the divide It argues that unrealistic expectations lead to both unproductive research and impossible standards for evidence based policy and practice and it offers promising ways for evidence to contribute to improvement It analyzes the utility and limitations of the different research methods that have been applied to policy and practice as well as the strengths and weaknesses of educational reform strategies It explains why using evidence for accountability often makes things worse rather than better Paul Lingenfelter offers educational researchers and policy makers a framework for considering such questions as What problems are important and accessible What methods will be fruitful Which help policy makers and practitioners make choices and learn how to improve What information is relevant What knowledge is valid and useful How can policy makers and practitioners establish a more productive division of labor based on their respective capabilities and limitations He cautions against the illusion that straight forward scientific

approaches and data can be successfully applied to society's most complex problems. While explaining why no single policy or intervention can solve complex problems, he concludes that determination, measurement, analysis, and adaptation based on evidence in specific situations can lead to significant improvement. This positive even-handed introduction to the use of research for problem solving concludes by suggesting emerging practices and approaches that can help scholars, practitioners, and policy leaders become more successful in reaching their fundamental goals. *The NAEP 1997 Arts Report Card* Hilary R. Persky, Brent A. Sandene, Janice M. Askew, 1998. The last several years have seen a growing resolve among educators and policymakers to assure the place of a solid arts education in U.S. schools. In 1997, the National Assessment of Educational Progress (NAEP) conducted a national assessment in the arts at grade 8. The assessment included the areas of music, theater, and visual arts. For each of these arts areas, this Report Card describes the achievement of eighth graders within the general population and in various subgroups. Taken with the information provided about instructional and institutional variables, this report gives a context for evaluating the status of students learning in the arts. The arts assessment was designed to measure the content specifications described in the arts framework for NAEP. The arts have a unique capacity to integrate intellect, emotions, and physical skills in the creation of meaning. Meaningful arts assessments need to be built around three arts processes: creating, performing, and responding. To capture these processes, the arts assessment exercises included authentic tasks that assessed students' knowledge and skills and constructed response and multiple choice questions that explore students' abilities to describe, analyze, interpret, and evaluate works of art in written form. Data are reported in overall summaries for creating, performing, and responding in terms of student and school reported background variables. Student results for theater are discussed in terms of teacher reported background variables as well. The major findings of the assessment are that a large percentage of grade 8 students attend schools in which music and visual arts were taught usually by specialists; most students attended schools in which instruction following district or state curricula was offered in music and visual arts but not in theater or dance; and most visual arts and music instruction took place in school facilities that were dedicated to that subject.
