Warehousing and Transportation Logistics Heinrich Martin, 2018-04-03 Warehousing and Transportation Logistics offers an overview of transport warehousing and assembly logistics including order picking packaging handling and management The key focus is on the management techniques in transport and warehousing and the logistics focused perspective runs throughout the entire book The author examines different applications and planning techniques and includes examples of supporting economic calculations and questions and answers Warehousing and Transportation Logistics looks at unit creation material flow or goods storage as well as systems and management for planning or information to identify objects control and processing of orders It is a practice oriented book for students with a multitude of useful information and ideas It is also a workbook for professional practitioners production planning and industrial engineers who are specifically concerned with the planning side of this specialist area The examples at the end of each chapter deepen and complement the content and there are comprehensive notes with each figure providing additional information on the topic

Evaluation Method of Energy Consumption in Logistic Warehouse Systems Pawel Zajac, 2015-09-14 This book focuses on guidelines for reducing the energy consumption in warehousing processes It presents a model of formal assessment for energy consumption in the context of storage system logistics as well as a computational model consisting of three sub models energy consumption models for forklifts and stacker cranes respectively and an energy intensity model for roller conveyors The concept model is based on the assumption that the unit load is received at a zero energy warehouse Subsequent handling transport and storage processes in which the unit load is moved vertically and horizontally through the system equate to changes in energy intensity within the logistics warehouse management system Energy recovery based on the handling equipment used can be collected in batteries The evaluation method takes into account the intensity of the energy supplied to the logistics system and reduces the storage of the recovered energy this figure represents the energy needed to pass through the logistics unit load storage system and can be expressed in an energy intensity map **Operator,**
