Measuring Up Science Grade 4 In Spanish:

Measuring Up Arie L. Nettles, Michael T. Nettles, 2012-12-06 *Measuring Up* revisits vital issues of equity and assessment through the research efforts and insights of many of the nation's most prominent educators and assessment experts. As its most urgent purpose, the publication aims to sensitize readers to the unfairness and inappropriate uses of testing instruments which under optimal circumstances have the potential to benefit all students. With America fervently espousing both national and state testing, the differential performance by race and social class raises the specter of tests as barriers to life milestones such as promotion, graduation, and college admissions. In response to such punitive testing, the papers included here explore a host of models and practices that are currently being piloted both in America and abroad as educators grapple with the effects the assessment is having on minority and disadvantaged students and school systems. In the process, outcomes of innovative portfolio and authentic assessments are weighed against important standards and principles of validity and consequences. As the various authors probe the gap between African American and White test scores, they raise important questions of resources, family background, and educational opportunity. Beyond their value of their recommendations to educators, their papers help to identify causes of pupil deficiencies in ways that can be addressed by policymakers. To reinforce the emphasis on equity, several authors present a definitive defense of affirmative action as a critical countermeasure to the lack of fairness in school quality, family and social supports, and educational resources.

The Age of Mass Child Removal in Spain Peter Anderson, 2021. This book examines the ideas and practices underpinning state removal of children. Early twentieth-century Spanish juvenile courts were involved in taking children from poor families, families displaced by war, and from political opponents. This study captures the voice and agency of the marginalized children and parents affected by mass removals.

Attitude Measurements in Science Education Dr. Myint Swe Khine,2015-04-01 The research into how students attitudes affect learning of science related subjects have been one of the core areas of interest by science educators The development in science education records various attempts in measuring attitudes and determining the correlations between behaviour achievements career aspirations gender identity and cultural inclination Some researchers noted that attitudes can be learned and teachers can encourage students to like science subjects through persuasion But some view that attitude is situated in context and it is much to do with upbringing and environment The critical role of attitude is well recognized in advancing science education in particular designing curriculum and choosing powerful pedagogies and nurturing students Since Noll 1935 seminal work on measuring the scientific attitudes a steady stream of research papers that describe development and validation of scales appear in scholarly publications Despite these efforts the progress in this area has been stagnated by limited understanding of the conception about attitude dimensionality and inability to determine the multitude of variables that made up such concept This book makes an attempt to take stock and critically examine the classical views on science attitudes and explore the contemporary attempts in measuring science related attitudes The chapters in this book are reflection of researchers who work tirelessly in promoting science education and will illuminate the current trends and future scenarios in attitude measurement
